

# This was the ROOT Workshop 2022

---

Axel Naumann [axel@cern.ch](mailto:axel@cern.ch) for the ROOT team  
2022-05-11

# Was it useful?

---

- Many presentations, all too short!
- High quality feedback:
  - not just praise (but thank you for that!)
  - but also criticism, food for thought, ideas
- For the ROOT team, this was all but boring! Surprises thanks to 'just say what you think' worked really well thanks to excellent speakers
- Hopefully, sharing ROOT news was useful, too: Monday had 80 participants

# Conclusion

---

- What we do has an impact: we can make your life easier (or harder...)
- When we invest, you notice: good tutorials, good documentation
  - This is not a given; it means we invest where it counts
- We cannot do much on music
- We can do much more on histograms, ROOT's python face, usability
- Performance is good - usability is what really matters: Vary(), nD-histos, etc

# What's next?

---

- We will be in touch with you
  - To make sure we understood
  - To address what you asked and suggested
- Please pose follow-up questions and ideas at <https://root-forum.cern.ch>
  - We really appreciate and benefit from such feedback, from novice to expert
- ...and we will have a next ROOT workshop, hopefully in 2024!

# Stay in Touch

---

- <https://root-forum.cern.ch>
- Watch <https://root.cern> for our blog
  - We continue to have news to share with you!
- Follow us at [@ROOT Project](#)

# Thank you

---

- To the participants:
  - For connecting, for presenting, for joining the discussions
- To Fermilab:
  - For providing the "local" organization and the logistics
  - And for supporting ROOT since 25 years!

THANK YOU

for your caring about ROOT!
