

Energy Frontier Status Report

Laura Reina
Meenakshi Narain
Alessandro Tricoli

Activities

- Ongoing discussions with several Frontiers to identify **liaisons**.
- We set up **bi-weekly meetings** with EF TG convenors to discuss group activities and planning, e.g. overlaps of physics topics across TGs and frontiers, meeting planning etc.
- We set up multiple **email lists and Slack channels** (one per TG). The community is signing up to those.
- We have received request from community for accessibility for some meetings, namely closed captioning.
 - We would like to understand how APS/DPF plans to support it.
 - There are 3rd party apps which can link to zoom and provide the services in real-time (e.g. otter.ai). However we need access/permissions from university ITs (as we generally use those zoom accounts). This may also not be given due to “no live-streaming” policies to external entities (e.g. Brown U).

Activities

- Several EF **TGs** have started arranging **meetings with their communities** (one already took place last week).
- **EF Kick-off meeting on May 21**, full day with presentations by EF and TG convenors, see [agenda](#).
 - We will need “closed captioning” for this meeting.
- We have started forming a **MC Task Force** to identify common needs for MC samples and analysis frameworks, as well as assessing how to estimate theory uncertainties .
 - Input for MC requests from the community will be solicited by the TG and provided to the Task Force to build up the initial plan.
