- Essential work continues on site
  - Keeping the g-2 ring cold
  - Work that enables working from home
    - Keeping computing running
    - Keeping the g-2 ring powered so we can perform remote field studies
    - Setting up mu2e long term tracker panel tests in lab 3
- Lots of work happening at home
  - Everyone is pretty busy, at least in PPD
- We will gradually phase in more technical work
  - Lab is working on a recovery plan, the details are still in flux
  - Bob T is the point for PPD work on Mu2e as the L2 for the Mu2e tracker
  - Alex K is the point for PPD work on g-2 as the g-2 shutdown coordinator
- What we expect for a while
  - Work that can be done remotely should be done remotely
  - If it can't, spend time, be creative, and figure out how to do it with one person
  - If you can't, spend time, be creative, and figure out how to do it with social distancing
  - If you can't, spend time, be creative, and figure out what PPE/barriers/precautions you need
    - ES&H guidelines are a minimum level for work to be approved.
- It may take more time to plan and execute work this way, but that will be balanced with the time it takes to approve and schedule the work.

# News

- Training
  - There is a new HA tool and new HA training being rolled out
    - Everyone performing technical work will need to take this training
    - We will need to understand how all the roles and responsibilities in the new version of 2060 map onto the g-2 and mu2e collaboration org charts in terms of approving work
  - We expect people are using work-at-home time to get caught up on their training, but the fraction of out-of-date training is not really decreasing
    - Please make this a priority
