Evolution of PHENIX into a Day-1 EIC Detector

Kenneth N. Barish UC Riverside

- **Motivation:** Study strongly coupled Quark Gluon Plasma in heavy-ion collisions via jet structure, heavy-flavor tagged jets, and Upsilon spectroscopy.
- New Detector at PHENIX IP
- New Collaboration (formed Dec 2015)
 - Cold QCD topical group being formed.
- **Reference design** (good foundation for EIC detector):
 - Magnet: 1.5T BaBar superconducting solenoid
 - Uniform acceptance $|\eta|{<}1.1$ and $0{<}\varphi{<}2\pi$

- Calorimetry (common readout electronics):
 - Compact fine segmentation electromagnetic calorimeter.
 - Hadronic calorimeter doubling as flux return
- High resolution tracking (in magnetic field within 80cm radius):
 - MAPS inner tracker
 - TPC outer tracker

sPHENIX news – Beam Test

Beam Test Preliminary results

- Simulation shows good agreement with early data results
- Expect to achieve required resolution of 12%/\/E

sPHENIX Timeline

RHIC Cold QCD Plan

- Requested by DOE, submitted Feb 2016
 - Subject of RBRC workshop
- Lays out a comprehensive set of important measurements to be made on the road to an EIC

Emerging Spin and Transverse Momentum Effects

in pp and p+A Collisions

RIKEN BNL Research Center Workshop

February 8-10, 2016 at Brookhaven National Laborator

http://arxiv.org/abs/1602.03922

Physics Goals From Cold QCD Plan

- Key Physics Measurements:
 - Jets in polarized p+p (510 GeV)
 - nFF's in p+A
 - DY and Direct Photons in p+A
 - Diffraction in polarized p+p (200 GeV)
 - Ultraperipheral Collisions in p+Au

For many of these measurements RHIC offers *unique* capabilities with unique kinematic coverage

- fsPHENIX studying to cover as many topics as possible:
 - Jets and Drell-Yan 🖌
 - Considering Roman Pots to cover additional topics

Forward instrumentation in sPHENIX

- sPHENIX plug door is compatible with a forward detector suite.
 - Plug door could be as thin as ~10cm
- Implement "forward sPHENIX":
 - GEM trackers and forward EMCal in magnetic field volume
 - Forward Hcal outside plug door
 - Magnetic field shaper piston
 - Roman Pots in beamline
 - Fits in 4.5m eRHIC IR constraint

Forward Calorimeters

Pb/Sc sandwich HCAL (NEW)

10 x 10 x 100 cm³ towers (1.2 < η < 4.0)

20x20 array of 2.2 x 2.2 x 18 cm³ **PbW (PHENIX MPC) EMCal Crystals** with 10x10 square hole (300 crystals total) 3.0-3.3 < η < 4.0

PHENIX PbSc EMCAL modules (5.5 x 5.5 x 33 cm³) organized in groups of four modules (3152 modules or 788 groups of 4) (1.4 < η < 3.0-3.3)

2016 EICUG Meeting ANL - Kenneth N. Barish

Jet Energy Resolution

Jets from 510 GeV Pythia8, using jet trigger, jet energy is <u>correlated</u> with pseudorapidity. Required E>20GeV, p_T>5GeV.

Forward Tracking

- Large area GEM tracking stations at z=120, 150, 275cm (1.45 < η < 4.0)
 - Space left between ST1 and 2 for future PID
 - Strong tie-ins with existing EIC R&D efforts!
- Additional passive field shaper piston to enhance field shape for improved momentum resolution at high η.

Momentum Resolution at high momentum limit

2016 EICUG Meeting ANL - Kenneth N. Barish

fsPHENIX Workfests

	iCal export M	us/Pacific + English + Login	 Parking anywhere (except reserved or handicap) OK on weekend Monday/Tuesday will need a permit Please send me the license # of your car You are OK to park in any of the General Staff (Yellow) parkin lots north of the Physics Building (aroos the street) 	в

Scientific Programme	We will hav	e regular, informal discussions about analysis related topics as well as lectures		
Timetable	related to s	bin physics.		
Contribution List	Dates:	from 18 July 2016 16:00 to 30 July 2016 20:00	3rd fcDHENIIX Morkfost.	
Registration	Timezone:	US/Pacific	J ISFIILINIA WOIKIESL	
Registration Form	Location:	University of California, Riverside	Iowa State University March 2016	
List of registrants		Department of Physics & Astronomy, Riverside, CA 92521 Room: Physics 3041	Towa State Oniversity, March 2010	
	Chairs:	Kom, mysics som		
	Additional info:	University of California, Riverside (UCR)		
		UCR (http://www.ucr.edu) is one of 10 universities within the University of California enrolls >22,000 students. The Department of Physics and Astronomy (http://www.pr students		

4th fsPHENIX Workfest: UC Riverside, July 2016

- Activity: Workfests + bi-weekly phone meetings
- Working toward a LOI by the end of 2016
- fsPHENIX is at the beginning stages, participation of new collaborators are welcomed!

Slide from Tim Hallman's talk at RHIC Users' Meeting, June 2016

On to the EIC...

Future Opportunities in p+p and p+ACollisions at RHIC with the Forward sPHENIX Detector

The PHENIX Collaboration April 29, 2014 Concept for an Electron Ion Collider (EIC) detector built around the BaBar solenoid

The PHENIX Collaboration February 3, 2014

arXiv:1402.1209v1

The forward detectors for fsPHENIX could potentially be re-used for an EIC detector!

2016 EICUG Meeting ANL - Kenneth N. Barish

Requirements (EIC task force):
High purity electron ID (99%)

- Energy measurement
- Angle measurement
- High survival probability in each x,Q² bin (80%)

◦ e-going and barrel coverage

Solution (electron-going): ✓ High resolution GEM Tracking ✓ High resolution Crystal EMCal

Solution (barrel): ✓ Compact-TPC ✓ sPHENIX EMCal

SIDIS: Hadrons from DIS

Black outline: Identified Kaons in planned PID detectors

Considering

e-going AeroGel modular RICH for 20GeV e-beam

Based on EIC eRD14

https://wiki.bnl.gov/conferences/ima ges/8/8c/ERD14_FY17_proposal.pdf

Requirements:

- Hadron ID
- 90% eff, 90% purity

Solution: RICH

✓ Barrel: DIRC (+TPC dE/dX for low p)
 ✓ h-going: Gas RICH (high p)& Aerogel (low p)

Exclusive DIS: DVCS photons

Requirements:

- \circ e/ γ separation over large x,Q²,t range
- Confirm exclusiveness

Solution:

✓ Granular EMCal and tracking from -4<η<4 ✓ Roman Pots

Day-1 EIC Detector

Tracking

- Barrel: sPHENIX options
 - Silicon, MAPS, TPC (9/2016 review)
- EIC Detector: TPC (+MAPS?) and GEM's

Tracking Updates

2016 EICUG Meeting ANL - Kenneth N. Barish

Electron Identification

- Cut on electron energy only marginally reduces x-Q² coverage
- Working toward full simulation.

Hadron Identification

- High purity for all particle species up to ~50 GeV with symmetric 90% efficiency cuts on mass distribution.
- Can be extended to higher momenta with asymmetric cuts.

Summary

- sPHENIX is a major new project that will make available probes of the Quark Gluon Plasma with unprecedented precision.
- Additional forward instrumentation added to sPHENIX (fsPHENIX) is being actively explored.
 - Extend the sPHENIX physics program to include p+p/p+A as well as longitudinal dynamics in HI collisions
 - Substantial re-use of existing detector systems for calorimetry
 - Tie-ins with EIC R&D
 - Pushing towards a new fsPHENIX LOI end of 2016
- Evolves naturally to a Day-1 EIC Detector
 - Covers critical acceptances and physics
- Ongoing simulation and detector R&D activities.

Extra slides ...

DIS: electron measurement

• Cut on electron energy only marginally reduces x-Q² coverage

SIDIS: Hadrons from DIS

• Identified kaons kinematics coverage

Exclusive DIS: DVCS photons

• Need to cover wide rapidity range

Hadron Identification

• All three RICH detectors are needed to cover full x-Q² range

2016 EICUG Meeting ANL - Kenneth N. Barish
