Organized by the Coordinating Panel for Advanced Detectors of the Division of Particles and Fields of the American Physical Society

This workshop will explore and evaluate Detector R&D opportunities, needs, and the challenges ahead for High Energy Physics in the US within the context of the P5 plan.

New ideas are particularly welcome!

 Starts 8 Oct 2016 06:00
Ends 10 Oct 2016 19:30
US/Pacific

 California Institute of Technology
Hameetman Auditorium, Cahill
1200 East California Blvd
Pasadena CA 91125

 No material yet 

 Dr. Wagner, Robert (co-chair)
Demarteau, Marcel (co-chair)
Shipsey, Ian (co-chair)
Spiropulu, Maria (co-chair)
Alexander, Jim
Heintz, Ulrich
Lipton, Ron
Van Berg, Rick

CALTECH

In September 1891, Pasadena philanthropist Amos Throop rented the Wooster Block building in Pasadena for the purpose of establishing Throop University, the forerunner to Caltech. In November of that year, Throop University opened its doors with 31 students and a six-member faculty. Throop might have remained simply a good local school had it not been for the arrival in Pasadena of astronomer George Ellery Hale. The first director of the Mount Wilson Observatory, Hale became a member of Throop's board of trustees in 1907, and began molding the school into a first-class institution for engineering and scientific research and education.

By 1921, Hale had been joined by chemist Arthur A. Noyes and physicist Robert A. Millikan. These three men set the school, which by then had been renamed the California Institute of Technology, firmly on its new course. Millikan and his successors—Lee DuBridge, Harold Brown, Marvin Goldberger, Thomas Everhart, David Baltimore, Jean-Lou Chameau, and now Thomas F. Rosenbaum—have led the Institute to its current academic and scientific preeminence.
