

Overview of the HL-LHC Upgrade for the CMS Level-1 Trigger

Thursday, 12 October 2017 13:25 (25 minutes)

The High-Luminosity LHC will open an unprecedented window on the weak-scale nature of the universe, providing high-precision measurements of the standard model as well as searches for new physics beyond the standard model. Such precision measurements and searches require information-rich datasets with a statistical power that matches the high-luminosity provided by the Phase-2 upgrade of the LHC. Efficiently collecting those datasets will be a challenging task, given the harsh environment of 200 proton-proton interactions per LHC bunch crossing. For this purpose, CMS is designing an efficient Level-1 hardware trigger that will include tracking information and high-granularity calorimeter information. The system design is expected to take full advantage of advances in FPGA and link technologies over the coming years.

Presenter: CAVANAUGH, Richard (University of Illinois at Chicago and Fermilab)
