LDRD Program: Overview and Future Directions

Thursday, May 7, 2015 – 3:30 p.m.
Bldg. 241, Rm. D-172

The Laboratory Directed Research and Development (LDRD) program is the only source of discretionary R&D funding at the laboratory. It is a precious resource for funding developments of new concepts to build Argonne's future R&D programs and capabilities. A review of the program will be presented along with a number of suggested improvements. The goal is to have an open discussion and get audience perspectives on ways to increase the LDRD program efficiency and impact.

Light refreshments will be served 15 minutes before talk.
