## “JCESR’s Search for Transportation Batteries Beyond Li-ion”

---

Thursday, September 17, 2015 – 3:30 p.m.  
Bldg. 241, Conf. Rm. D-172

---

Li-ion will be the battery chemistry of choice for electric vehicles for the near future. This talk will try to address the following questions: Do other technologies exist that may have a fundamentally lower cost curve? How is JCESR trying to discover and develop these chemistries? Which are the most promising at this point?

Light refreshments will be served 15 minutes before talk.
