

XVI International Symposium on Very High Energy Cosmic Ray Interactions
(ISVHECRI 2010)

Contribution ID: 124

Type: **Invited**

Recent Results from CMS

Monday, 28 June 2010 15:00 (30 minutes)

The status of CMS concerning the 2009 run and the first data recorded at 7 TeV in 2010 will be reported. After a summary of the LHC and detector performance, including some example of interesting events, the talk will focus to the first results obtained. In particular, emphasis will be given to low-pT QCD physics including charged hadron spectra, the measurement of Bose-Einstein correlations (BEC) and of underlying event properties.
