

XVI International Symposium on Very High Energy Cosmic Ray Interactions
(ISVHECRI 2010)

Contribution ID: 9

Type: **Contributed**

On the electron/positron excesses and the knee of cosmic ray spectra

Tuesday, 29 June 2010 11:50 (15 minutes)

Based on the cosmic rays acceleration in the young supernova remnant like environment, electron and positron pair production through the interactions between high energy cosmic rays and radiation background photons is studied. It is found that both the electron/positron excesses and the knee structure of the cosmic ray spectra can be explained with one set of the source parameters.

Primary author: Dr HU, Hongbo (IHEP,CAS,China)

Co-authors: Dr WANG, Bo (IHEP,CAS,China); Dr FAN, Chao (IHEP,CAS,China); Dr ZHANG, Jianli (IHEP,CAS,China); Dr YUAN, Qiang (IHEP,CAS,China); Dr BI, Xiaojun (IHEP,CAS,China)

Presenter: Prof. MA, Yuqian (IHEP)

Session Classification: Balloon and Satellite Experiments

Track Classification: Balloon and satellite experiments
