

Workshop on Detector R&D

Thursday, 7 October 2010 - Saturday, 9 October 2010

Fermilab

Scientific Programme

<big>State of the art detectors are the critical tool for probing and understanding nature, not just in the physical sciences but also most other fields of science. This workshop will examine the challenges for developing and deploying new detector technologies to meet the needs in the national program of particle and astro-particle physics and other closely related fields of science. The scientific program will consist of an overview the detector R&D organization in the U.S. and Europe, the U.S. Laboratory facilities and current programs and discuss the challenges meeting future detectors. All sessions will be plenary with only invited talks. </big>
