## Constructive Interference in the $B$ to $\tau\nu$ amplitude in the MSSM with negative $\mu$

*Tuesday, 30 August 2011 15:10 (20 minutes)*

We show, that it is possible to get constructive interference between SM and SUSY contributions in the  $B \rightarrow \tau\nu$  amplitude by choosing a negative and large  $\mu$ . We demonstrate how the SUSY spectrum will have to be chosen and that it is possible to fulfill all other experimental constraints especially the ones coming from  $b \rightarrow s\gamma$  and  $g\mu$ .
