## Leptogenesis in neutrinophilic Higgs doublet models

*Wednesday, August 31, 2011 2:50 PM (25 minutes)*

We show that in a class of two Higgs doublet model, where one Higgs doublet generates masses of quarks and charged leptons whereas the other Higgs doublet with a tiny vacuum expectation value generates neutrino Dirac masses.

Thermal leptogenesis suitably works at low energy scale.

Its supersymmetric generalization also will be discussed.

**Presenter:** Dr SETO, Osamu (Hokkai-Gakuen University)

**Session Classification:** Parallel Session 7
