## SUSY decays in the Complex MSSM: Full One-Loop Calculations

*Monday, 29 August 2011 12:35 (25 minutes)*

We evaluate the decay of SUSY particles in the complex MSSM (cMSSM) at the full one-loop level. A consistent calculation requires the simultaneous renormalization of the complete cMSSM. We present the renormalization, which is valid for practically the whole cMSSM parameter space, together with numerical results for Gluino, Stop and Chargino decays. Special emphasis is put on the production of Higgs bosons or the LSP in SUSY cascades.
