

Quantum update

- Did not receive many updates for this month. I've heard that the site visit for the NQI center went well from more than one source.
- Qnets
 - good progress with architecture and control plane design (Wenji),
 - demonstrated utilization of optical switch for quantum network operations,
 - work at FCC3 (second lab) resumed,
 - about to publish record on operation robustness and rate (using the sister lab to FQNET at Caltech, since they remained open)
- Postdoc Baris Ozguler starts Monday (Quantum simulation project)
