

Updates from NF03

- Thoughts on November community planning meeting:
 - Downsides of a virtual meeting: lack of small group discussions, difficulty in keeping everyone's attention, difficult to raise questions/start a discussion
 - Can we find creative solutions?
- Proposed NF03 questions for Town Hall:
 1. What experiment will/could make the largest improvement in sensitivity to BSM scenario X in the next 5-10 years?
 2. What kinds of new physics searches should we prioritize, especially considering that the LHC has seen no new physics so far?
- Updates from NF03:
 - We have assigned liaisons for closely related groups: Lisa for NF01, Jae for NF02, Ian for NF08, and Pilar for RF06 (Dark Sector)
 - Planning for joint workshop with NF02, NF03, NF08, maybe others. At Pittsburgh, tentatively planning for the week of Feb 22. (Confirmed with NF02 conveners. If we haven't been in touch with your group yet, we will be!)
