

NF07 - Applications Topical Group LOI Plans

- No LOIs received for NF07 yet
- LOIs for Safeguards Applications:
 - we are considering coordinating a single LOI from the Applied Antineutrino Physics technology community to highlight connections with HEP
 - the major US nonproliferation R&D funding agency has commissioned a study on the utility of neutrinos (<https://nutools.ornl.gov/>) - this study group will submit an LOI describing the purpose and goals of this effort
 - The Nu Tools study is holding a mini-work series for application technology efforts at the end of July. We will use this as an opportunity to solicit LOIs from individual projects
 - we can anticipate overlap with other groups at the project and topic level, e.g.:
 - reactors as sources
 - oscillation physics at reactors
