

# NF03 status report

(Pilar Coloma, Lisa Koerner, Ian Shoemaker and Jaehoon Yu)

- Lols **received** so far:
  - Direct submissions to NF03: On “Neutrino Self-Interactions” and on “Laboratory searches for KeV sterile neutrinos”
  - There is a generic CEnuNS Lol, and one specific for CONNIE. These have partial overlap with NF03 topics
  - FCC-ee: this would probably fit better on the energy frontier (?) but there is partial overlap with NF03 (lepton universality, lepton flavor violation, long-lived particle searches)
- Additional Lols which **we expect to receive**:
  - DUNE plans to submit several Lols on different BSM topics
  - 1-3 Lols on heavy neutral lepton searches (meson decays, colliders, neutrinoless)
  - One on the use of radioactive sources to test neutrino properties
  - One on ALP searches at neutrino experiments
