

# ProtoDUNE-SP operation updates

S. Tufanli  
June 19, 2020

# This week

- Cosmic runs for attenuation studies
  - New configurations with triggering on specific CRT cells
    - Details in Kyle's talk today
  
- DAQ tests and developments
  - FELIX hit finding studies
  - Micron FPGA tests on APA2
    - Details in Manu's talk today
  
- Neutron generator tests
  - Neutron generator was turned on and was successfully tested on last Tuesday

## Next week

- Cosmic runs with PDs+TPC for attenuation studies
  - CERN day time and CERN night(~US day time)
- Micron FPGA tests. Late in the afternoons, using APA2
- DAQ tests late in the afternoons
- Continue with HV test preparations
  
- Whenever we have a chance:
  - Cold electronics calibration runs
  - Pulse injection (30kHz-300kHz) into the wire bias connection to verify the filter/ripple requirement
