

Status of NF09 (Artificial Neutrino Sources)

(L. Fields, A. Marino, P. Ochoa, J. Spitz)

– Continue to work on the LOI front:

- Active discussions with several people
- Expect LOIs from several areas:
 - Conventional beams (e.g. Fermilab, JPARC)
 - Hadron production (e.g. NA61, Emphatic)
 - Nuclear Reactors (e.g. JUNO-TAO, PROSPECT)
 - Novel sources (e.g. IsoDAR)

+ many others, including small groups interested in specific areas

(some of these will overlap with other groups)

– **We had to revise our mini-workshop dates:**

- Original date: October 5-7 ← **conflicts with new CPM dates!**
- New proposed date: December 2-4 (W-F)
 - Virtual, 3 days, 3-4 hours per day
 - Organized around list of “big topics” shown above
 - **Are there any conflicts with these dates we are not aware of?**

– Starting to plan for CPM meeting:

- Would definitely benefit from more info on the expected format and goals/deliverables
