Search for Anomalous Production of Events with a W or Z Boson and Additional Leptons

Tuesday, 31 May 2011 11:40 (20 minutes)

We present a search for anomalous production of events containing a W or Z boson and additional leptons. The search uses data corresponding to $5.1~{\rm fb}^{-1}$ of integrated luminosity from $p\bar{p}$ collisions at a center-of-mass energy of $\sqrt{s}=1.96$ TeV. We find no indications of non-standard-model phenomena. Limits are set for a dark-matter inspired model of supersymmetric dark sector Higgs production.
