## The 28th International Workshop on Weak Interactions and Neutrinos (WIN2021)

Contribution ID: 198 Type: Poster session

## Inverse Seesaw in A\_5 Modular symmetry

We investigate an inverse seesaw model based on U(1)\_{B-L} gauge symmetry and A\_5 modular symmetry. These symmetries helps to avoid unwanted terms and constrain the structure to acquire the inverse seesaw form. Then we can obtain some predictions in neutrino sector such as Dirac-CP phase and sum of neutrino mass, by numerical analysis. We also discuss implications to lepton flavour violation in our model.
