* The Leadership Academy for Women in Science and Engineering (LAWISE), a task force established in 2019, will explore new programs that provide training to, and increase the numbers of, women scientist and engineer leaders at the national laboratories and UChicago. The LAWISE task force is part of the Joint Task Force Initiative (JTFI), a signature University of Chicago program dedicated to helping Argonne and Fermilab achieve mission success. It has led to the creation of several joint task forces that provide critical support for the national laboratories.
