

MAGIS-100 Laser Transport Vacuum Simulations and LED Atom Tracker

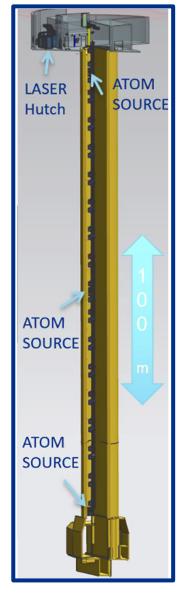

Jordan Aasman Mentors: Linda Valerio, Jesse Batko, Beth Klein Intern Poster Session 5 August 2020

Background

- Matter-wave Atomic Gradiometer
 Interferometric Sensor
 - Dark matter and new forces
 - Advancing quantum science
 - Gravitational wave detector development
- Atom interferometry

Atom Source Photo: Stanford University

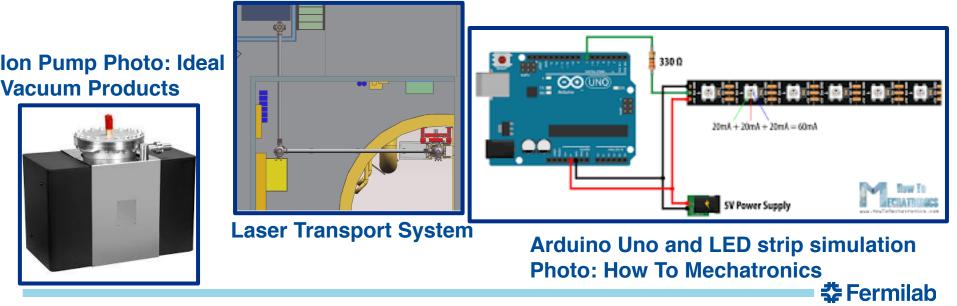

100m shaft Sr atoms will traverse

My Projects

- Vacuum Simulations for the Laser Transport System (LTS)
 - Compare low conductance designs of lens mounts
 - Characterize pressure profile of the LTS

- LED Atom Tracker
 - Propose materials to implement in the project
 - Design software for the different science modes

Vacuum Simulations for the Laser Transport System (LTS)-Purpose

Ensure vacuum system has low Inside look at the LTS enough pressure to meet experimental requirements High Vacuum Laser goes through the Δ LTS to the top of the shaft **Ultra-High** Vacuum

🛟 Fermilab

4 8/4/20 Jordan Aasman I Intern Poster Session

5. Run thermal simulation in ANSYS

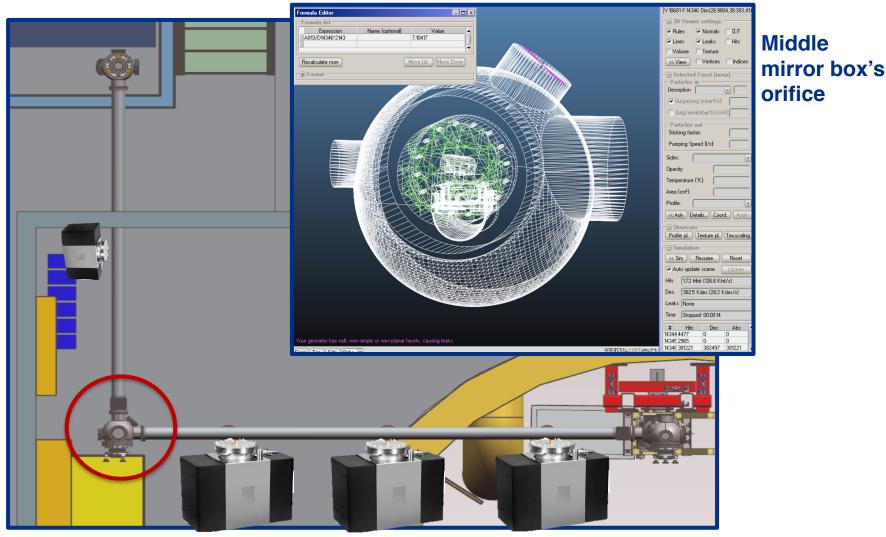

6. Convert data back to vacuum

Fermilab

7. Plot pressure distribution

Vacuum Simulations for the Laser Transport System (LTS)-Variables

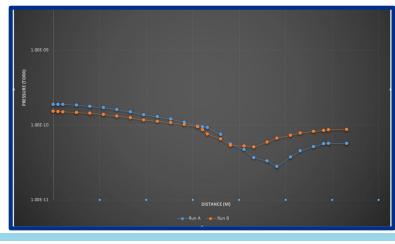

lon pump speed and placement

Vacuum Simulations for the Laser Transport System (LTS)-Results

Initial design: 4 ion pumps 0.8" orifice holes

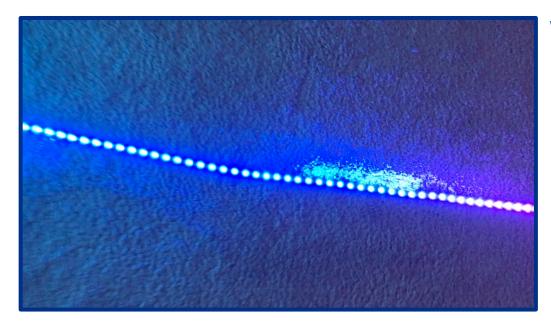

Final design: adjusted orifice size to remove an ion pump

Final proposed designmeets experimental requirement at 8.67E-11 torr

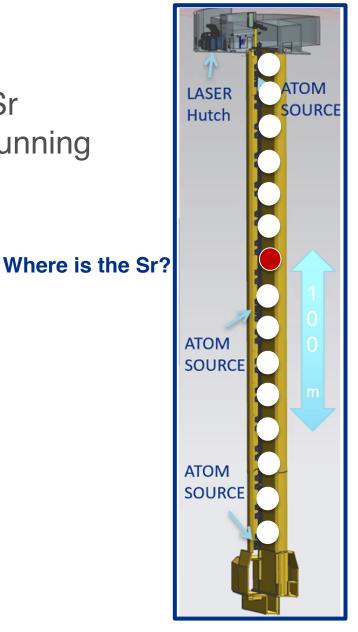

‡ Fermilab

LED Atom Tracker-Purpose

- Allow spectators to see where the Sr atoms are while the experiment is running
- Public outreach

Programmable LEDs in action

LED Atom Tracker-Procedure

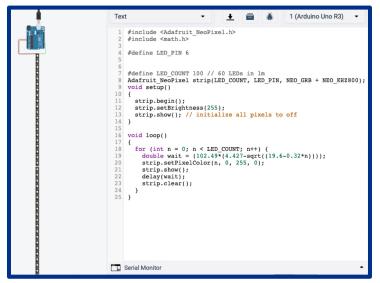

The function DelayTime[MaxHeight_LEDDensity_] calculates a function to implement into the code using the height and LED density of the LED strips: In[3]:= DelayTime[5000, 60] nth LED time of 1st flash = 102.041 (9.89949 - Re[$\sqrt{98. - 0.326667 n}$]) milliseconds n^{th} LED time of 2nd flash = 1010.15 + 58.3212 $\sqrt{300 - n}$ milliseconds n^{th} LED delay time = -102.041 Re[$\sqrt{98. - 0.326667 n}$] + 102.041 Re[$\sqrt{98.3267 - 0.326667 n}$] milliseconds Minimum delay time (bottom of trajectory) = 1.68 milliseconds Maximum delay time (top of trajectory) = 58.3 milliseconds Flash Time Delay Time Flash time Tf (ms) Delay time (ms) 60 200 50 150 Out[3]: 40 Tf2 30 1000 Tf1 20 500 LED n LED n 50 100 150 200 250 300 50 100 150 200 250 300

1. Calculate atoms' trajectory, Mathematica Notebook courtesy of Sam Carman, Stanford

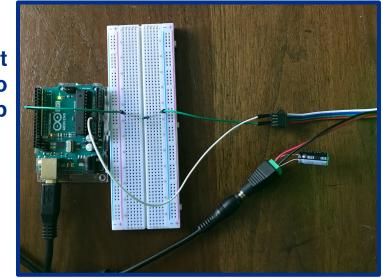

3. Create program in Arduino Integrated Development Environment (IDE)

4. Connect Arduino to LED strip

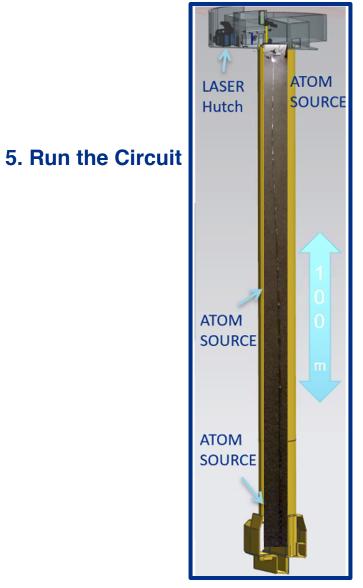

2. Design in TinkerCAD

LED Atom Tracker- Procedure

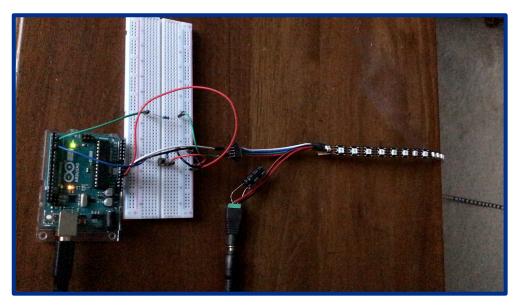

LED Atom Tracker- Results

- 5m segment complete
 - Software programs
 - Stable Connections
 - Start on button press
- Power requirements

Recommendations on how to scale Connection

Connection for power injection

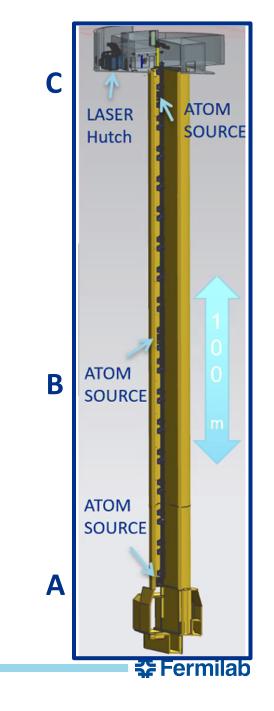

Circuit starting on button press

LED Atom Tracker- Future

- Scale up to 100m
 - Power injection
- Safety specifications
- Software for all science modes

MAGIS-100 Collaborators
