

Event Generators for Accelerator-Based Neutrino Experiments

Tuesday, 22 September 2020 11:40 (10 minutes)

In this talk I will summarize our recent Snowmass LOI. Upcoming accelerator-based neutrino experiments present a challenging theoretical problem for the event generator community. In our letter, we highlight some of the unique challenges and suggest some possible solutions. We believe that important lessons, both technical and organizational, can be learned from the great success of the hadronic event generator community at the LHC.
