arXiv: 1212.1701

Heavy Flavor to Probe Gluon Dynamics at EIC

- EIC is a machine for precision investigation of gluon dynamics in nucleon/nucleus
- Heavy flavor in NC channel - sensitive probe to initial gluons

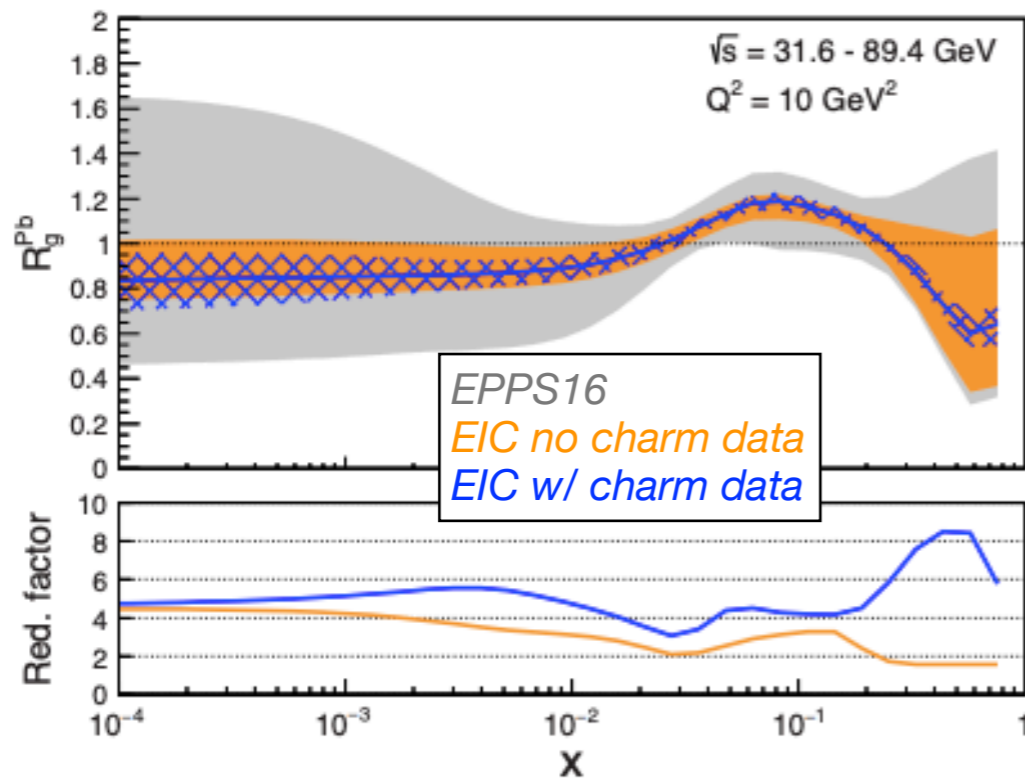

- **Inclusive** heavy flavor measurement to constrain *gluon nPDF*, particularly at high x
- Heavy flavor **double spin asymmetry** for gluon helicity $\Delta g/g$
- **$D\bar{D}$ pair** reconstruction to access *gluon TMD PDFs*
- Heavy flavor hadron (D, Λ_c etc.) for *hadronization* and *CNM* effect

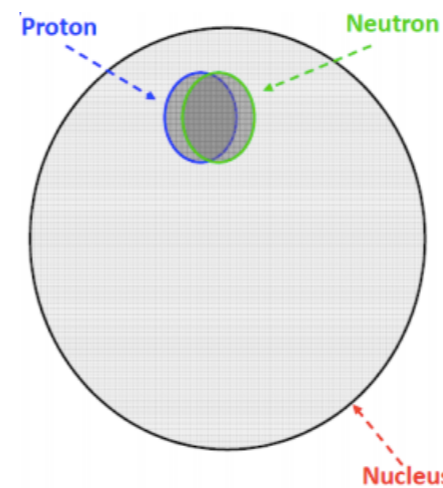

Inclusive Charm -> Gluon nPDF at High x

$$R_g^{Pb} = f_g^{Pb}(x, Q^2) / f_g^p(x, Q^2)$$

E. Chudakov et al, 1610.08536

gluon probe to short range correlation

More details see S. Sekula's presentation

Gluon Helicity $\Delta g/g$

Understanding proton spin is one of the EIC science goals

HF - better sensitivity to the gluon dynamics

- complementary to the inclusive measurement

- direct access to $\Delta g/g$ LO $A_{LL} \propto \hat{a}_{LL} \times \Delta g/g$

Inclusive g_1 measurement - EIC white paper

COMPASS data from open charm

$D\bar{D}$ Pair - Probe Gluon TMDs

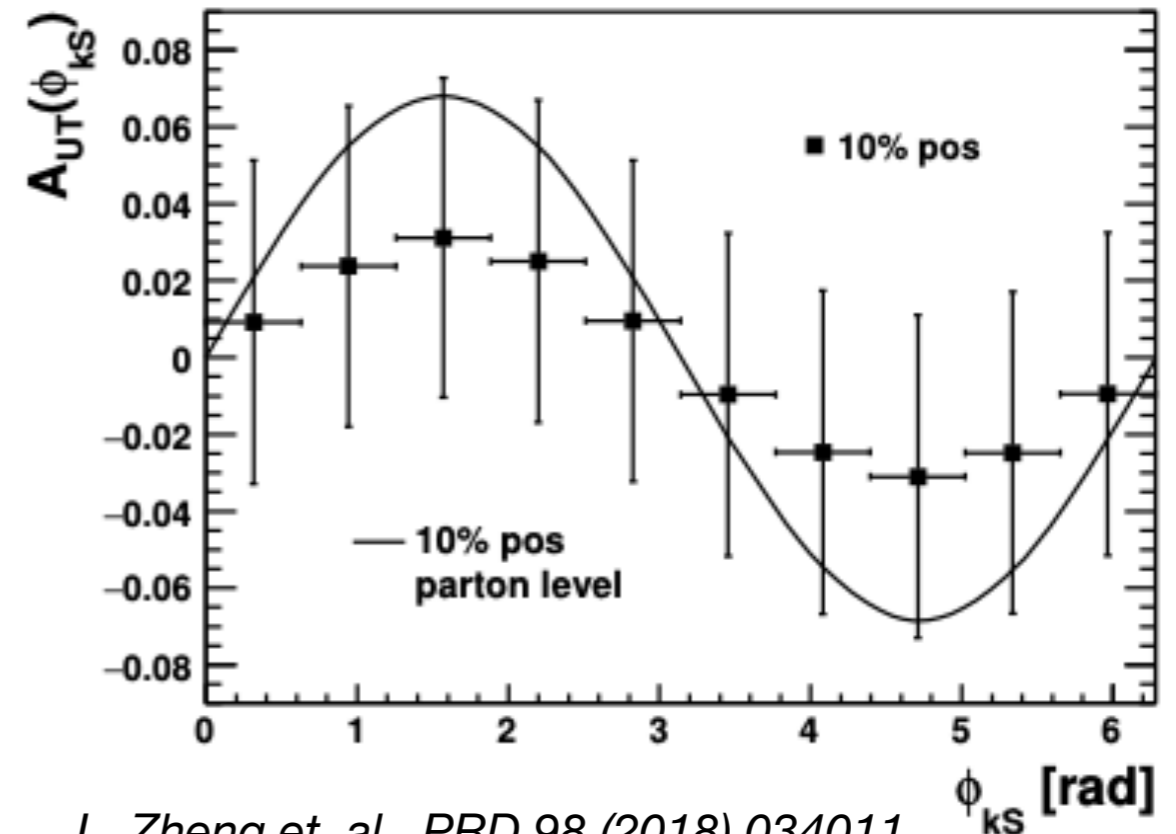

Charm hadron pair in transverse polarized exp.
 - gluon Sivers functions

Charm hadron pair in unpolarized exp.
 - linearly polarized Boer-Mulders function

$$A_{UT}(\phi_{k_S}, k_T) = \frac{d\sigma^\uparrow(\phi_{k_S}, k_T) - d\sigma^\downarrow(\phi_{k_S}, k_T)}{d\sigma^\uparrow(\phi_{k_S}, k_T) + d\sigma^\downarrow(\phi_{k_S}, k_T)}$$

		Quark Polarization		
		Un-Polarized (U)	Longitudinally Polarized (L)	Transversely Polarized (T)
Nucleon Polarization	U	$f_1 = \odot$		$h_1^\perp = \odot - \ominus$ Boer-Mulders
	L		$g_{1L} = \odot \rightarrow - \ominus \rightarrow$ Helicity	$h_{1L}^\perp = \odot \rightarrow - \ominus \rightarrow$
	T	$f_{1T}^\perp = \odot \uparrow - \ominus \downarrow$ Sivers	$g_{1T}^\perp = \odot \uparrow - \ominus \uparrow$	$h_1 = \odot \uparrow - \ominus \uparrow$ Transversity $h_{1T}^\perp = \odot \uparrow - \ominus \downarrow$

Kinematic Distributions

Tracking Detector Concept

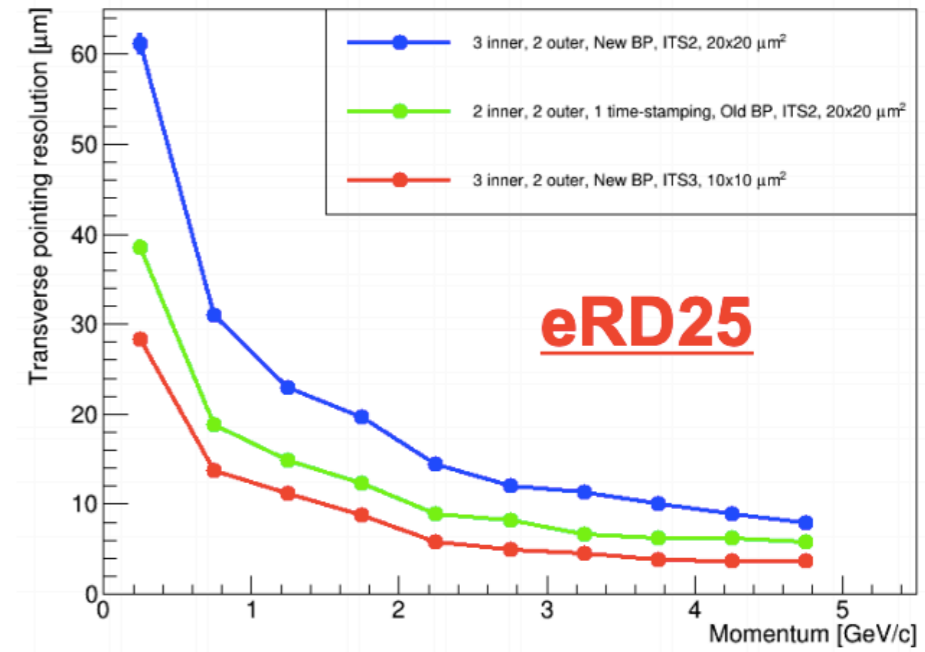

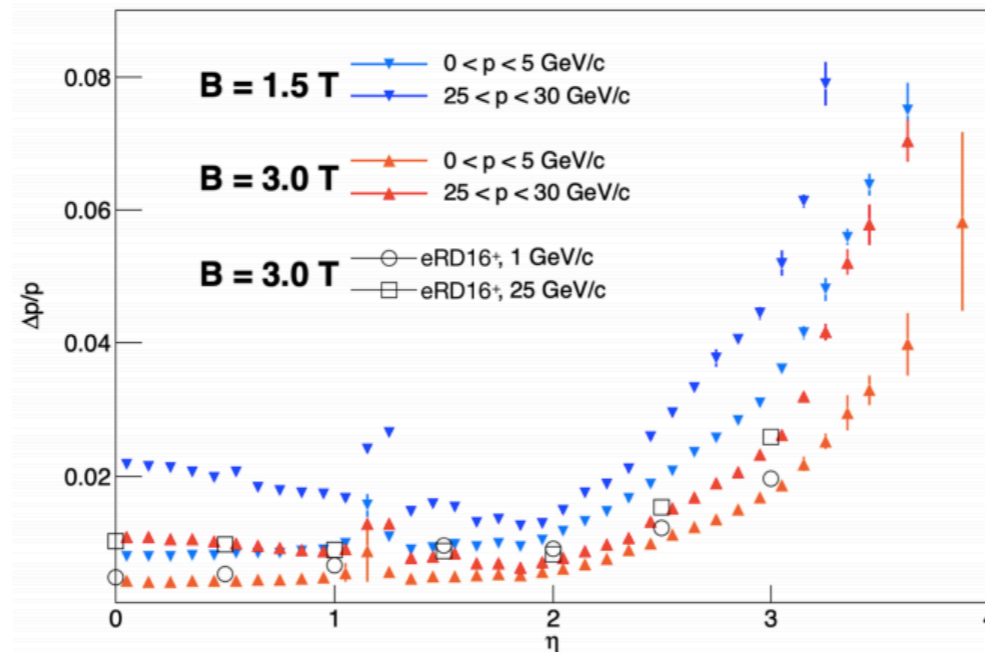

Hybrid: gas outer tracker + Si vertex

All-Si compact tracker

Detector requirements:

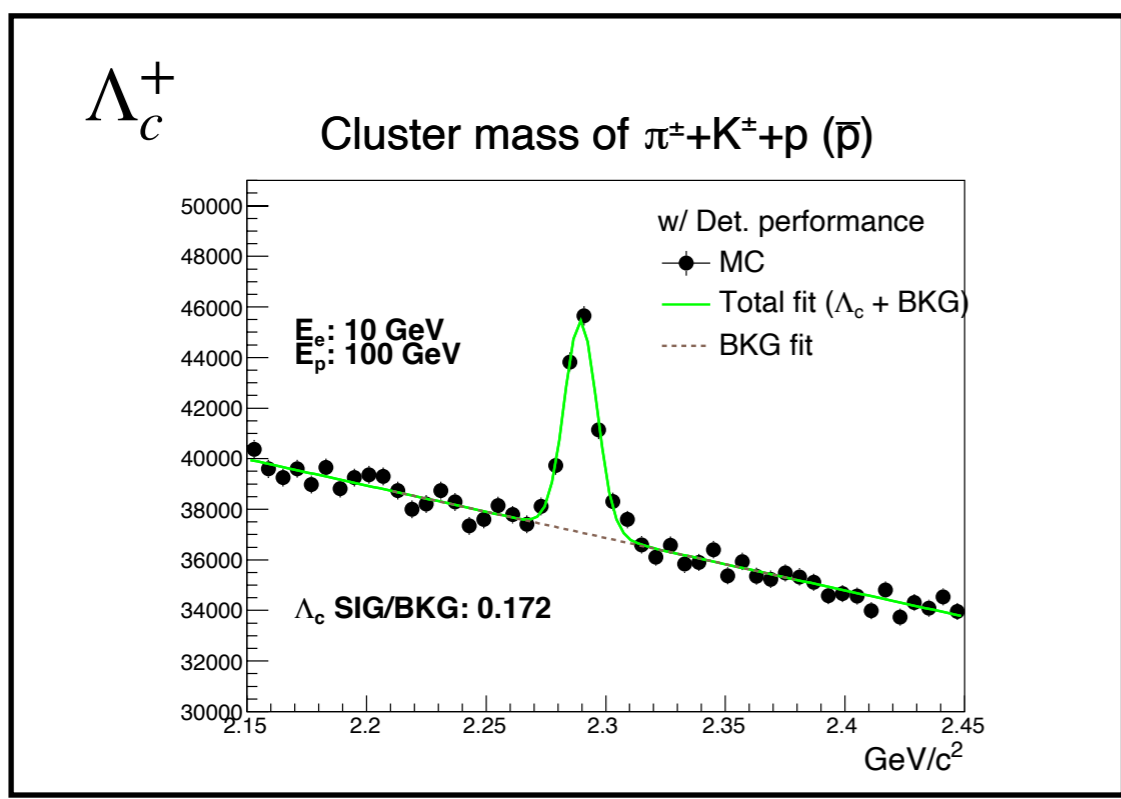

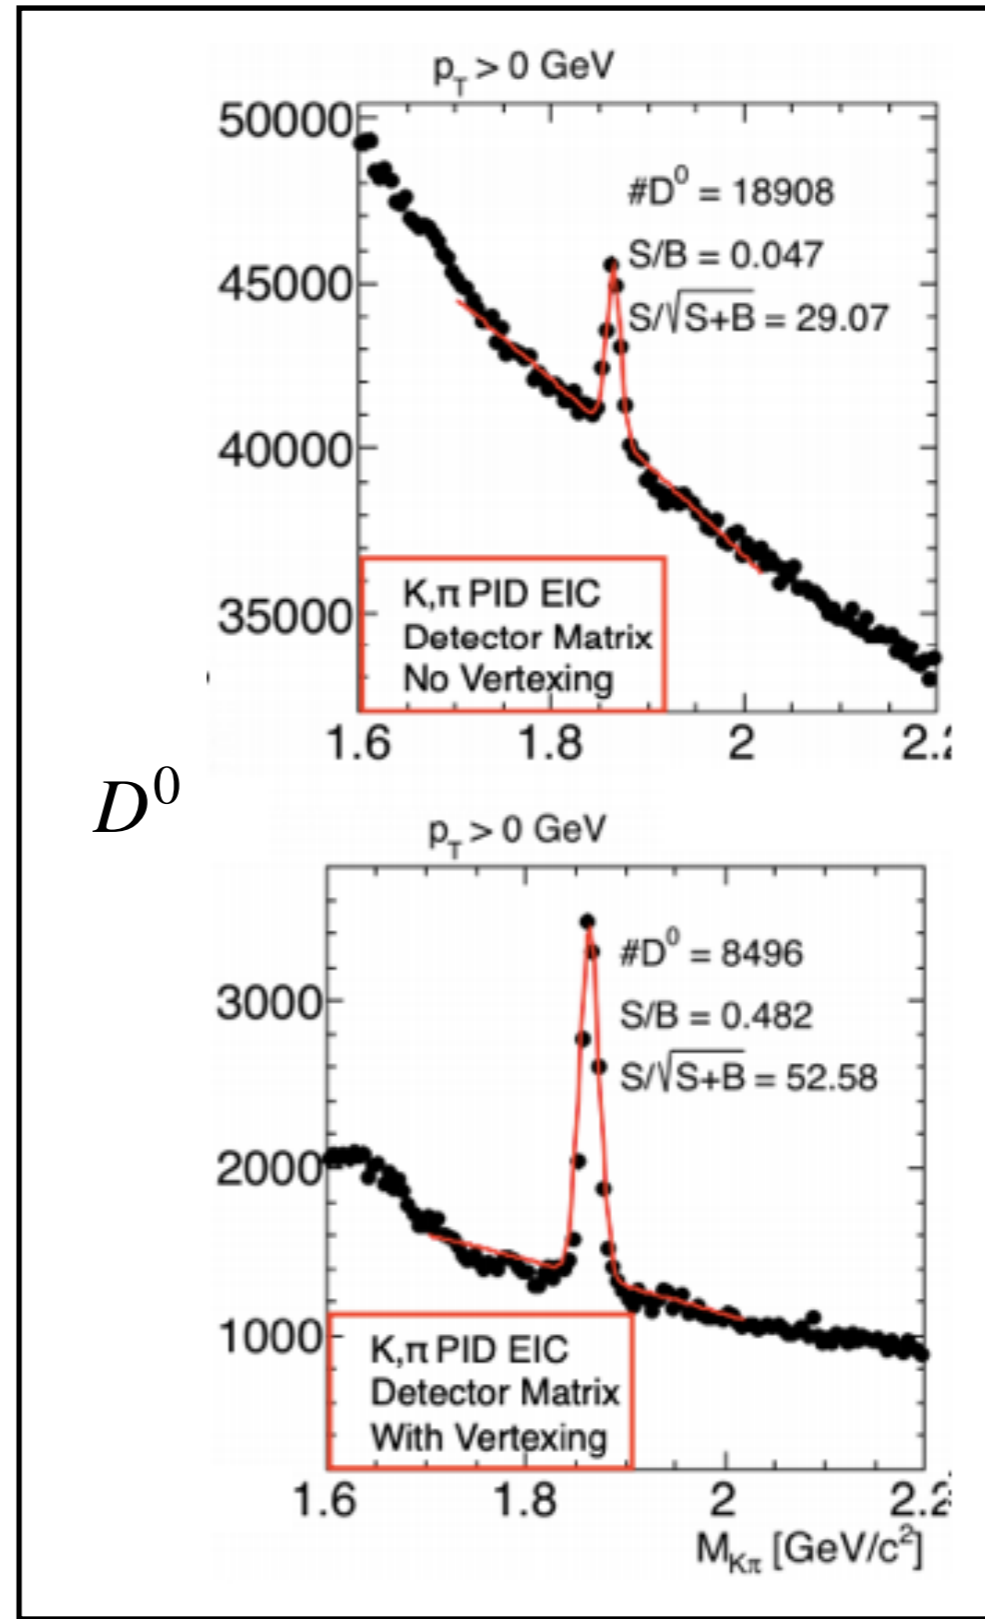

- hermetic coverage
- thin detector material
- fine pitch size

Ultra-thin fine-pitch MAPS: 10x10 μm pitch, ~0.05% X_0 vertexing layers

- requirements on PID, calorimeters etc under discussion

Performance

Ongoing efforts in Physics and Detector Working Groups towards EIC Yellow Report

Summary

- **Inclusive HF** -> *gluon (n)PDF*
- **HF A_{LL}** -> *gluon helicity*
- **$D\bar{D}$ pair** -> *gluon TMDs*
- **D, Λ_C** -> *hadronization* and *CNM*

- Heavy quarks offer a unique role in studying gluon dynamics in QCD at EIC.
- EIC is a precision QCD machine!
 - Ongoing community efforts aim for optimization of (tracking) detector design.
