

# A review of Arc R&D

J. Norem, ANL/HEP

MAP meeting  
Aug 5, 2011

# Breakdown is generally relevant.

Accelerator

Normal Conducting

Source of our problems, also CLIC

Failure mode for pulsed heating

SC pulsed power cleaning, field emission More E => more sensitivity

Spontaneous FE

Fusion

Impurities, Stability

RF heating limits

Industrial

High power switching

coatings

Spark plugs

...

Satellites

...

Intellectual / scientific

**But there is still no basic theory.**

Should a theory of breakdown explain the breakdown of the scientific method?

Many workarounds.

## International Symposia on Discharges and Electrical Insulation in Vacuum

<http://ieeexplore.ieee.org/xpl/mostRecentIssue.jsp?punumber=5613127>

Large international group that meets every two years

Primarily devoted to coatings and high power switching

The screenshot displays the IEEE Xplore Digital Library interface. At the top, there is a search bar with the IEEE logo to its right. Below the search bar, navigation links include 'Advanced Search', 'Preferences', 'Search Tips', and a checkbox for 'Search within contents'. A secondary navigation bar contains 'BROWSE', 'MY SETTINGS', 'CART', 'SIGN IN', and links to 'About IEEE Xplore', 'Terms of Use', 'Feedback', and 'Help'. The main content area shows a breadcrumb trail: 'Browse > Conferences > Discharges and Electrical Insulation in Vacuum'. The primary search result is for the 'Discharges and Electrical Insulation in Vacuum (ISDEIV), 2010 24th International Symposium on', dated August 30, 2010, to September 3, 2010. Below the title, there are options to 'Download Citations', 'Email Selected Results', and 'Print'. A 'Select All | Deselect All' bar is present. Two search results are listed, each with a checkbox and a 'Quick Abstract' button. The first result is 'Deposition of Ti-Al-N coatings using two-channel T-Shaped magnetic filter' by Aksyonov, D.S., Aksenov, I.I., Luchaninov, A.A., Reshetnyak, E.N., and Strel'nitskij, V.E., with page numbers 494-496 and a DOI of 10.1109/DEIV.2010.5625890. The second result is 'From "whiskers" to "dust" - the critical role of dedicated diagnostic techniques in promoting paradigm shift' by Latham, R.V., with page numbers 1-5 and a DOI of 10.1109/DEIV.2010.5625888. On the left, a 'TITLE HISTORY' sidebar lists previous symposia from 2000 to 2008. On the right, a 'NOT A SUBSCRIBER?' box offers subscription information.

## SRF 2011

Dear Colleagues,

We welcome you to attend the 15th International Conference on RF Superconductivity to take place on July 25-29, 2011 in downtown Chicago. Our goal is to continue in the tradition of the 14 previous conferences and provide a lively forum for SRF scientists, engineers, students and industrial partners to present and discuss the latest developments in the science and technology of superconducting rf for particle accelerators.

Pictures taken during the SRF 2011 boat trip and Banquet dinner are available [here](#) (picasa link).

# Mechanisms of Vacuum Arcs, Helsinki, June 27 - 30, 2011

## Talks:

Burkhard Juettner	Breakdown and arc in ultrahigh vacuum: Large devices affected by microscopic regions
Walter Wuensch (presentation)	Breakdown in high-gradient accelerating structures
Edgar Dullni (presentation)	Pre-breakdown and breakdown phenomena on contacts in vacuum interrupters
Joel Rasch (presentation)	Microwave multipactor and corona breakdown in inhomogeneous fields
Kamel Frigui (presentation)	Microwave breakdown at atmospheric pressure in waveguide filters.
Matt Hopkins (presentation)	Progress Modeling 3D Vacuum Arc Discharge
Jay Hirshfield	Breakdown in a bimodal cavity - status of experiment
Valery Dolgashev	Pulsed surface heating and status of SLAC experiments
Flavio Soldera (presentation)	Local degradation of materials microstructure due to high voltage discharge
Kenneth Österberg (presentation)	Dynamic vacuum measurement
Guenter Mueller (presentation)	Field emission from particulates and surface irregularities as precursor of microplasmas
Rocío Santiago Kern (presentation)	Field Emission Measurements. The mysterious nature of the field enhancement factor
Arno Candel	Parallel Electromagnetic Accelerator Modeling Code Suite ACE3P
John Power (presentation)	Schottky Enabled Photo-electron Emission & Dark Current Experiments
Tomoko Muranaka (presentation)	Scanning Electron Microscope in situ breakdown experiments at Uppsala
Richard Forbes (presentation)	Electrical Thermodynamics and the Formation of Nanoprotrusions
Flyura Djurabekova (presentation)	Multiscale modelling of electrical breakdown
Sergio Calatroni (presentation)	DC spark test system at CERN: main results and future objectives
Yasuo Higashi (presentation)	Development of Scanning Field Emission Microscope
Konstantin Matyash	Particle in Cell simulation of RF and DC break down plasmas
Helga Timko	Modelling plasma build-up in vacuum discharges
Paul Crozier	Vacuum arc simulations using Aleph
Jim Norem (presentation)	Modeling Arcs
Micha Dehler (presentation)	FEA Cathode and Gun Simulations
Marc Fivel	3D Discrete Dislocation Dynamics simulations : principles and applications
Steve Fitzgerald	Dislocations
Aarne Pohjonen (presentation)	Dislocation mechanisms on a near surface void under static electric field induced stress
Stefan Parviainen (presentation)	Atomistic modeling of Atom Probe Tomography
Markus Aicheler (presentation)	B-field Arcs and Wormlike features in CLIC accelerating structures
Walter Wuensch	Summary + Conclusion

<http://beam.acclab.helsinki.fi/hip/mevarc11/programme.php>

(30 talks, 20 on web)

## Highlights of the Helsinki meeting

A wide range of modeling techniques was described.

A wide range of experimental applications was discussed.

Plasma and materials properties and mechanisms were covered.

Much of the CERN/CLIC related work was updates.

CERN: Tests of cavities and small gap arcs

SLAC: Cavity testing some modeling and measurements of pulse heating damage

Helsinki: Breakdown modeling, surface dislocations

Sandia: Arc modeling in support of Helsinki model

European universities and labs: starting experimental and modeling efforts.

New data on arc damage in spark plugs

New descriptions of dislocations.

Many did not put their talks on the web, making it hard to summarize the conf.

# Introductory talks

## Burkhard Juttner

General introduction to the field stressinging how small areas cause big problems.

## Walter Wuensch

CLIC perspective

High gradient technology has many applications

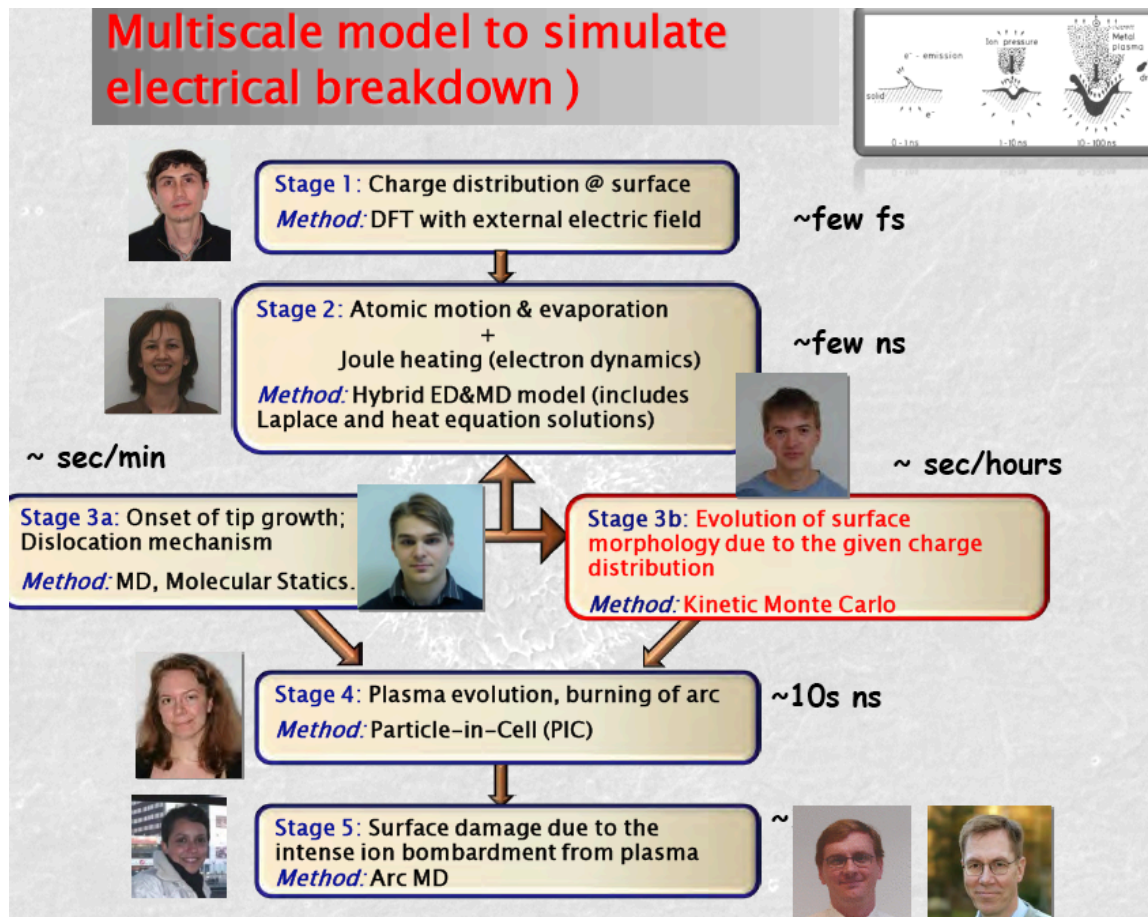

Test areas: NLCTA, ASTA (SLAC), Nextef (KEK) Klystron and two beam (CERN)

# Helsinki

Helsinki in June is great.

They use a number of models

A European Collaboration.

Model triggers

Arc evolution

Damage

Surface deformations

Metallurgy / morphology

## The Helsinki group collaborates with:

### CERN

Combined effort to understand small gap experiments  
Explanation of arc physics

### IPP Garching

Helsinki use IPP model for initial state of BD,  
Sheath physics is dominant during BD phase.

### Uppsala University

Experiments are starting to look at BD in an SEM

### Sandia

Sandia has a large effort modeling arcs of various geometries.  
Cross checks between Sandia and Helsinki (Hopkins, Crosier, )

And others. . .

## Other Helsinki/related efforts:

### Stefan Parviainen

Studies of Atom Probe Tomography theory  
Atomic motion and ion optics

### Steve Fitzgerald, Aarne Pohjonen and Marc Fivel

Study of dislocation and dislocation dynamics  
Movies of dislocation loops flying through materials

Insepov's loops

## Industrial interest

### Edgar Dullni, (ABB group)

Studies of commercial vacuum interuptors

### Joel Rasch (Chalmers-CNES\_IAP Collab.)

Breakdown in aerospace

### Kamel Frigui (Limoges/CRS Thales)

Breakdown in waveguide filters at atmospheric pressure (tuning stubs)

# CERN (Calatroni)

Modifying their arc gap to look at high frequencies, high rep rates.

Coaxial contacts

Large temperature range

Faster solid state electronics

12 kV pulses, no load  
Green: trigger (3  $\mu$ s width)  
Pink & yellow: voltage output

12 kV pulses, short circuit  
Green: trigger (3  $\mu$ s width)  
Pink & blue: current output

New results on cleanliness

and surface modification (surface changes)

The near perfect surface processing affected only the processing time. The second structure processed to maximum gradient in a few minutes vs few hours for the normally processed structure.

# CERN (Aicheler)

SEM images of arcs in cavities and small gap system

They see arcs at the braze joint, far from the iris.

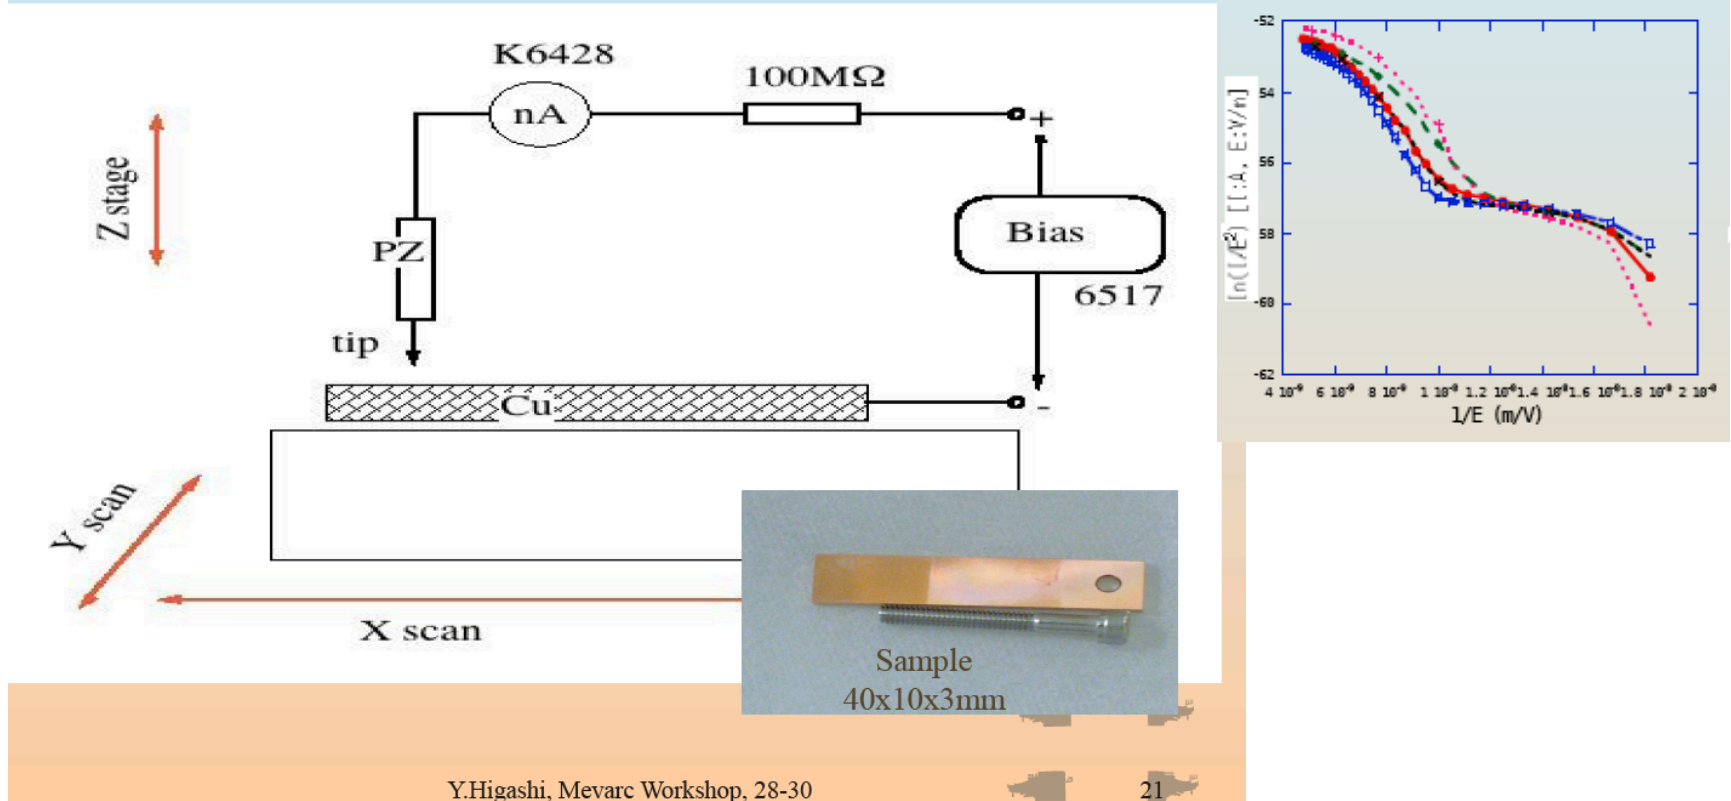

KEK

Yasuo Higashi

Building a scanning Field Emission Microscope

Schematic view of Scanning Field Emission Microscope

Lisa Laurant at SLAC is buying/building one of these.

# SLAC

## Valery Dolgashev

Summary of recent SLAC results, frequently reported by others.

## Arno Candel

Summaries of Parallel Electromagnetic Accelerator Modeling results

ACE3P simulations of Waveguide operation

Field emission with space charge limit

Pulsed heating - evidence from changing cavity shapes, rf profiles &  $B_{rf}$  fields

## Richard Forbes

Cold field electron emission (CFE) can be part of the formation of vacuum arcs.

With accelerators, this process is often modelled by using (a) the Fowler-Nordheim type (FN-type) equation developed by Murphy & Good [1,2] in 1956 and (b) a specific approximation developed by Charbonnier & Martin [3] in 1962 for a correction factor " $v$ " in this equation. This remains satisfactory for many modelling purposes, but there have been subsequent developments.

Overall, it is now recognized that FN-type equations are the CFE equations that apply to "*bulk*" (i.e., large) *metal* point-like emitters (and to arrays of such emitters).

Theoretical developments over the last 15 years can be classified into:

- Improvements in underlying theory, and/or in applying it (charged surface theory, electrostatics, tunnelling theory, statistical mechanics).
- Improvements (of various kinds) to FN-type equations.
- Development of theory for *small* emitters.
- Development of theory for *non-metallic* emitters.
- Improved theory for analysing current-voltage characteristics.

All except (probably) Heading 4 are relevant to accelerator breakdown. Various progress items are listed below, with an emphasis on the author's contributions.

# Guenter Mueller

Uses Scanning Field Emission Microscope and SEM to find emitters in Nb.

$E_{on}(2nA) < 60$  MV/m  
~500  $\mu$ m long scratch  
(mishandling of sample)

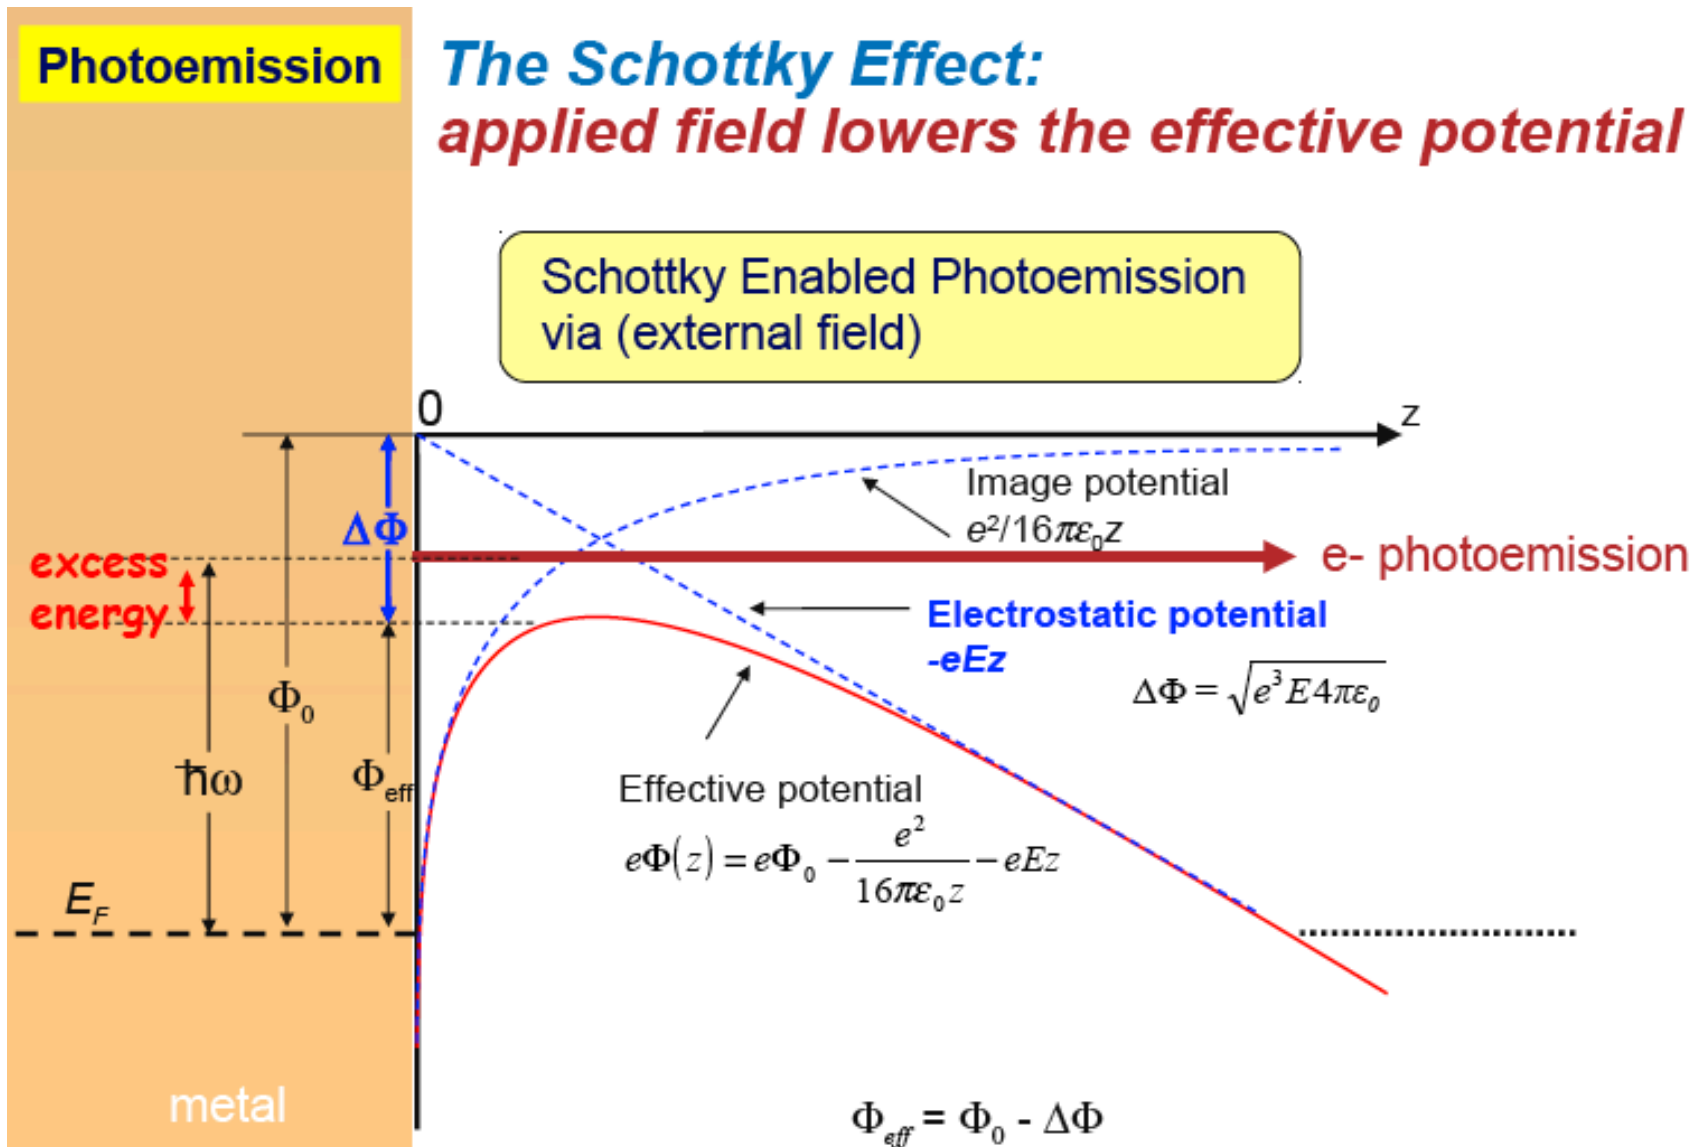

$E_{on}(2nA) = 90$  MV/m  
~5  $\mu$ m long groove  
 $\beta = 71$ ,  $S = 2.3 \cdot 10^{-6}$   $\mu$ m<sup>2</sup>

$E_{on}(2nA) > 140$  MV/m  
~1  $\mu$ m small defect

# John Power

Study of how photoemission and field emission interact.

## Spark plugs

- The mission of the spark plug is to start the combustion of the air/fuel mixture
- Limitation of the lifetime through the increase of the electrode gap due to the erosion of the electrodes
  - Change interval at the beginning: 1.000 km
  - Change interval today: 60.000 km (Nickel alloys)  
100.000 km (Platinum)
- The erosion is caused by the interaction between the spark-plasma and the electrode surface

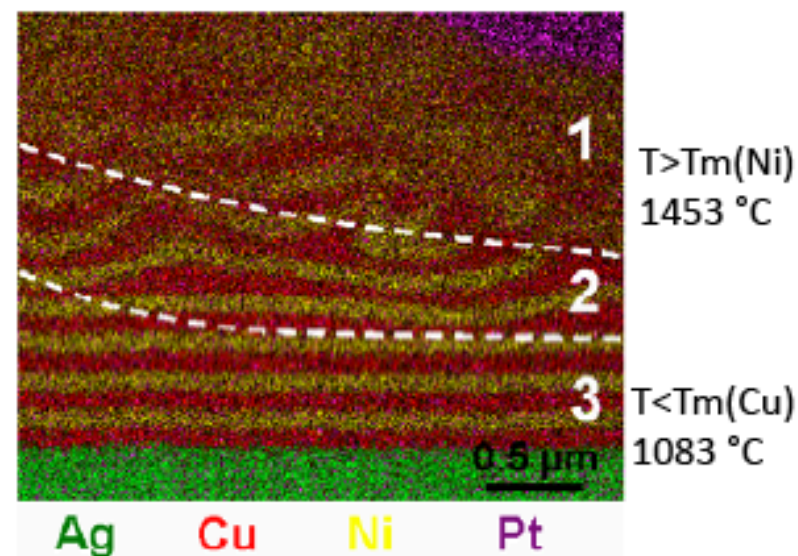

100 Years spark plugs (2002)

Spark plug from 1902

# Crates in multilayer systems

*N. Jeanvoine et al. Pract. Metallogr.* **43** (2006) 479

# FIB-Tomography of craters

Serial cross sectioning of crater  
200 slices

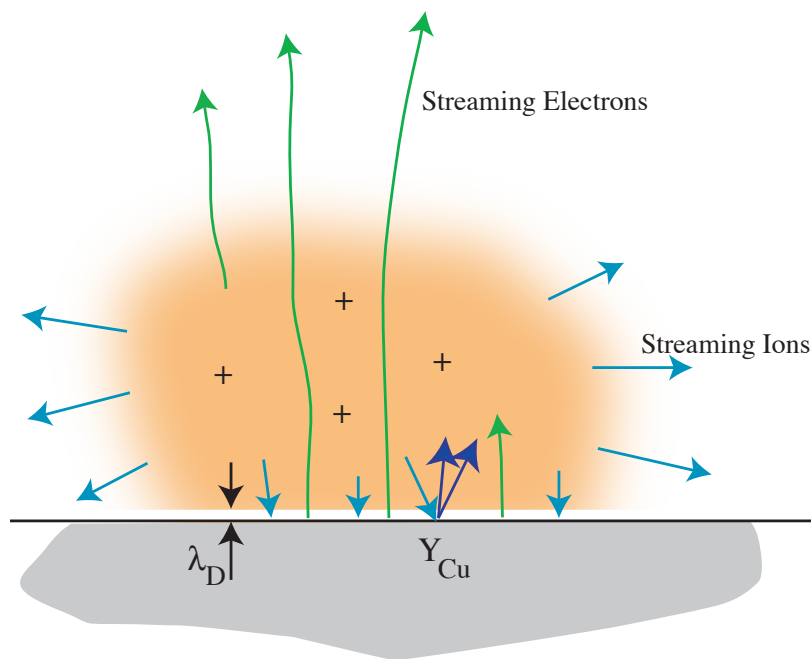

3D reconstruction of the molten pool  
resolution  $\sim 100 \text{ nm}$

N. Jeanvoine *et al*, Adv. Eng. Mat. 10 (2008)

# Zeke and I .

Ions heat the near surface  
Electrons heat the far surface  
internal B field < 100 T  
rf growth time ~ 1 ns  
radius 3 - 100  $\mu$

Defining parameters:  
Surface electric field  
Self-sputtering yield

Typical parameters  
Plasma density  
Sheath potential  
Average surface field  
plasma pressure  
Debye length,  $\lambda_D$   
Surface temperature  
Self-sputtering yield  
Arc power to surface

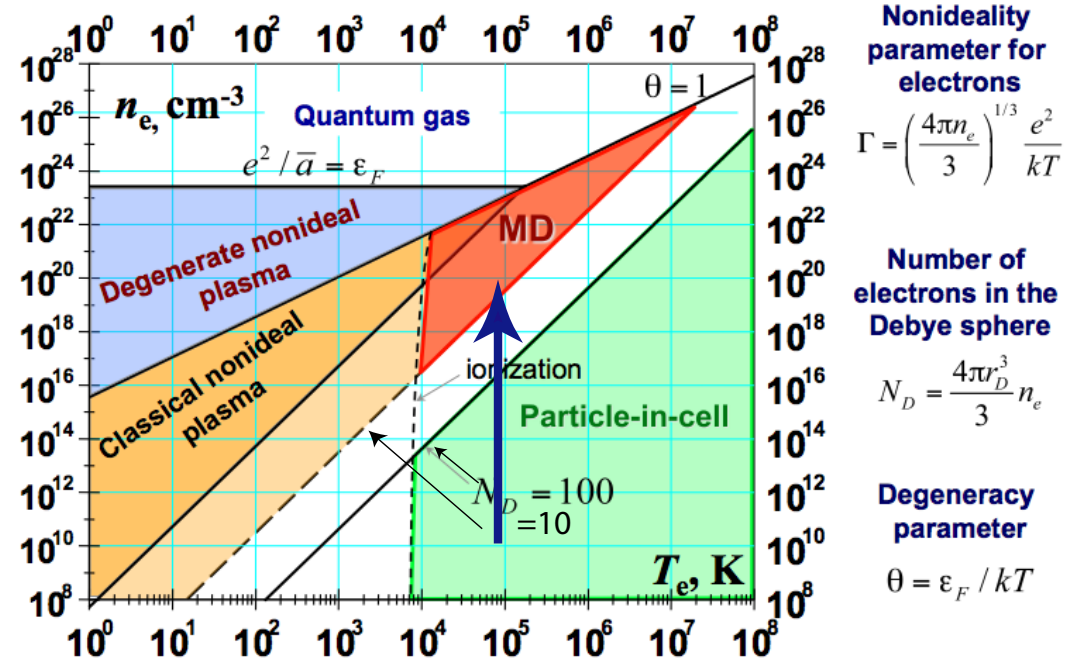

Initiation  
 $1E13 /m^3$   
50 V  
20 MV/m  
0  
 $\sim 1 \mu$   
 $\sim 30^\circ C$   
<1  
0

Burning  
 $1E24 - 1E26 /m^3$   
75 V  
10 GV/m  
100 MPa  
 $\sim 1 \text{ nm}$   
 $> 1300^\circ C$   
 $\sim 10$   
 $\sim 1E12 \text{ W}/m^2$

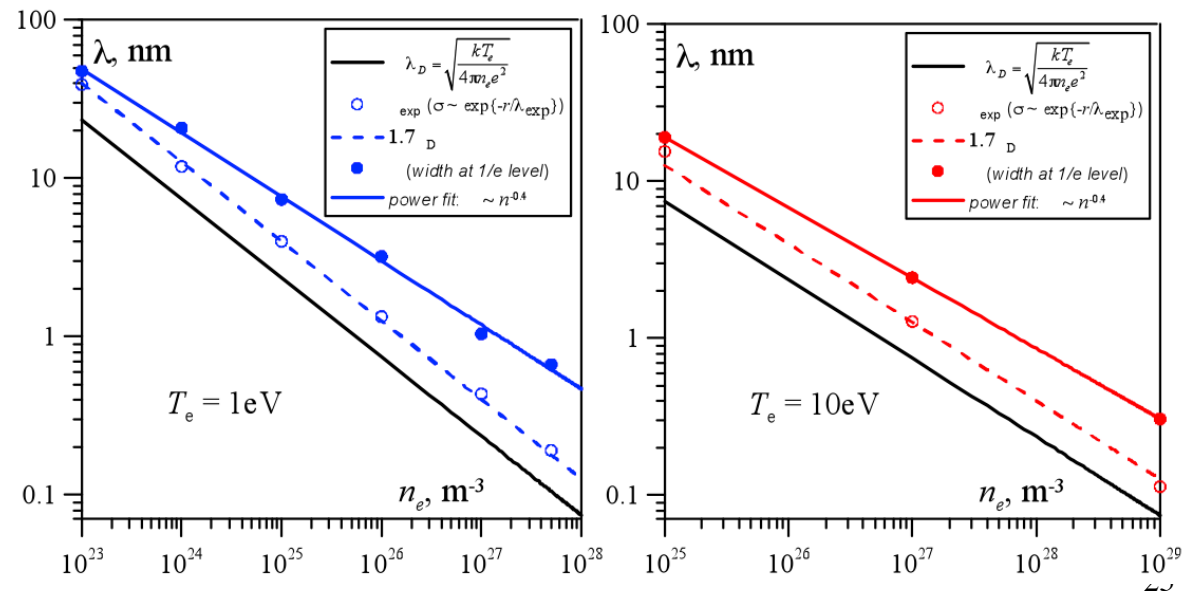

# We can understand the dense plasma / surface interaction.

We are using Molecular Dynamics to study the dense sheath.

The results are reasonable, and show how arc surfaces behave at high densities.

## Summary

The effort is becoming more interesting.

More people, more approaches, more data.
