## ARTIFICIAL INTELLIGENCE

Any technique which enables computers to mimic human behavior

## MACHINE LEARNING

AI techniques that give computers the ability to learn without being explicitly programmed to do so

## DEEP LEARNING

A subset of ML which make the computation of multi-layer neural networks feasible

# Brief Introduction to ML

# Brief Introduction to Neural Network

(a)

(b)

Input

Output

Hidden Layers

$$w_{new} = w_{old} + \eta \cdot \nabla Error$$

Weights are updated according to the backpropagation algorithm

## Network tuning

- » Learning rate
- » Number of nodes
- » Number of hidden layers
- » Bias
- » Batch size

## Activation function

**Sigmoid**  
 $\sigma(x) = \frac{1}{1+e^{-x}}$

**tanh**  
 $\tanh(x)$

**ReLU**  
 $\max(0, x)$

**Leaky ReLU**  
 $\max(0.1x, x)$

**Maxout**  
 $\max(w_1^T x + b_1, w_2^T x + b_2)$

**ELU**  

$$\begin{cases} x & x \geq 0 \\ \alpha(e^x - 1) & x < 0 \end{cases}$$

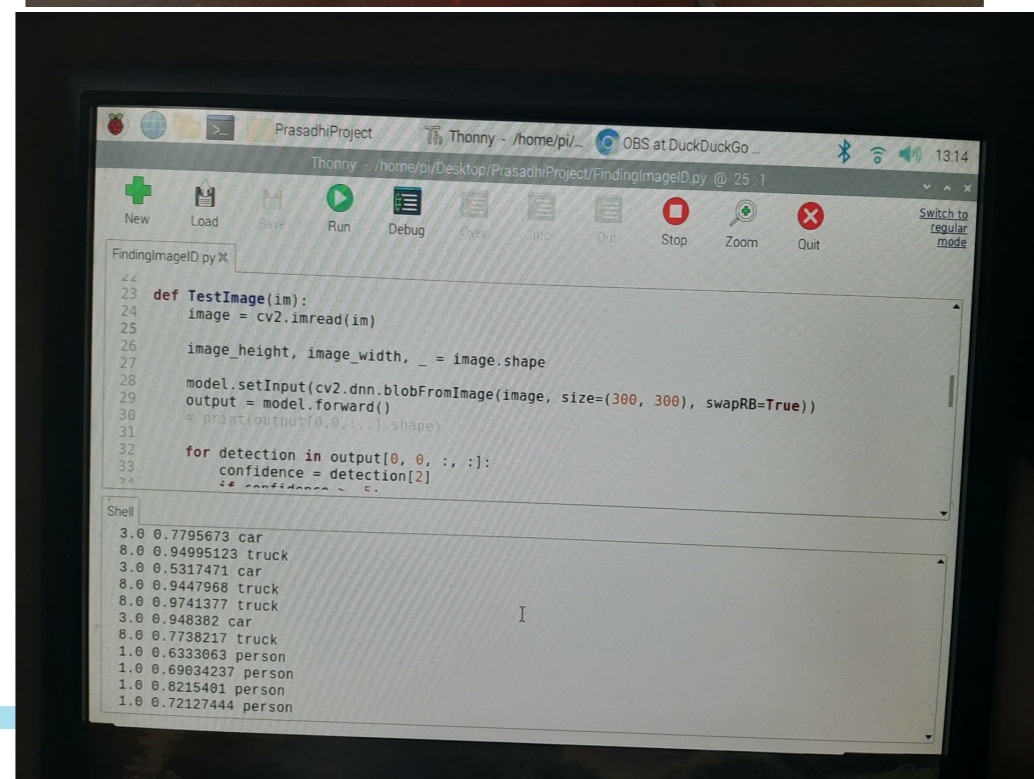

## Example of an activation function

$$\frac{1}{1 + \exp\left(-\sum_j w_j x_j - b\right)}$$

# My IoT project for fun

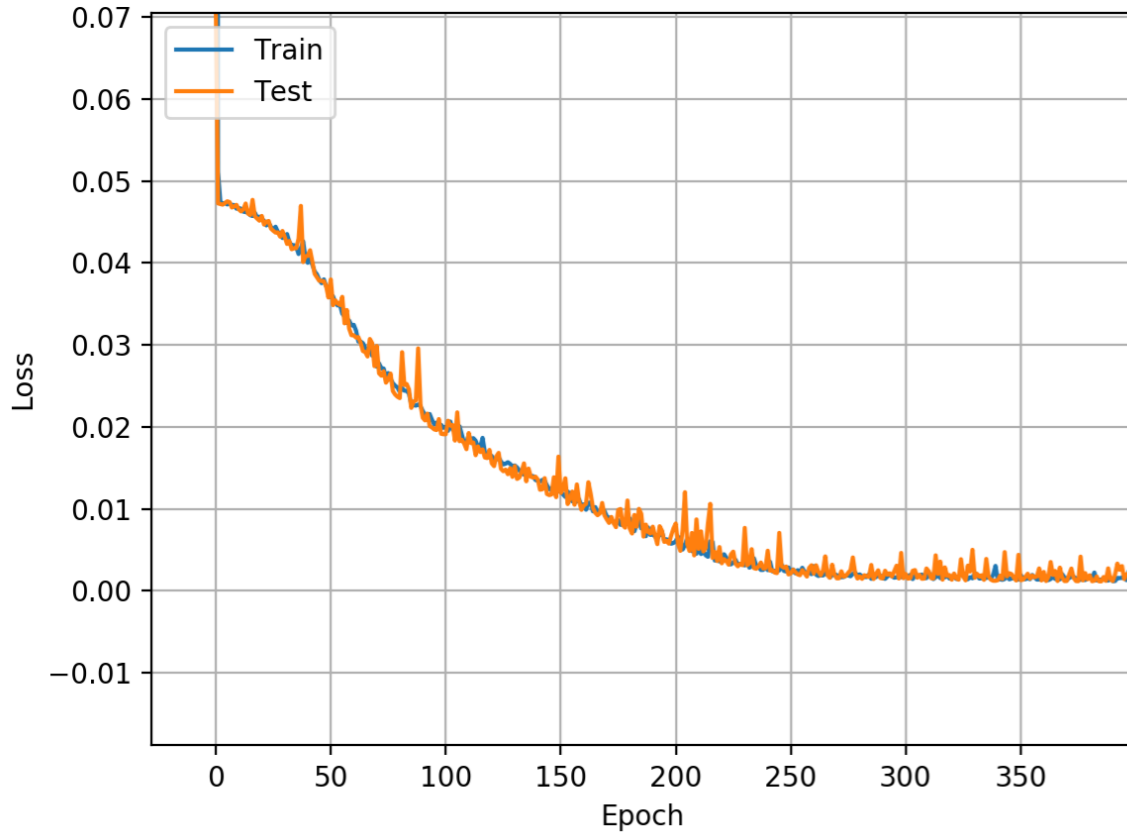

This is a small project of showing how to take an action based on identifying an object and the distance to that object

CNN Model: MobilNet\_SSD:v2\_coco\_2018

# Simple example of predicting beamXY

Model loss

Let's see a demonstration of this example in the TSD server
