Mu2e slow control and online DAQ interface development

Thursday, 19 August 2021 11:15 (15 minutes)

The muon campus program at Fermilab includes the Mu2e experiment that will search for a charged-lepton flavor violating processes where a negative muon converts into an electron in the field of an aluminum nucleus, improving by four orders of magnitude the search sensitivity reached so far.

Mu2e's Trigger and Data Acquisition System (TDAQ) uses *otsdaq* solution. Developed at Fermilab, *otsdaq* uses the *artdaq* DAQ framework and *art* analysis framework, for event transfer, filtering, and processing. *otsdaq* is an online DAQ software suite with a focus on flexibility and scalability, and provides a multi-user interface accessible through a web browser.

A Detector Control System (DCS) for monitoring, controlling, alarming, and archiving has been developed using the Experimental Physics and Industrial Control System (EPICS) open source Platform. The DCS System has also been integrated into *otsdaq*, providing a GUI multi-user, web-based control, and monitoring dashboard.

Primary authors: GIOIOSA, Antonio (University of Pisa and INFN Pisa); BONVENTRE, Richard (Lawrence Berkeley National Lab); DONATI, Simone (Istituto Nazionale di Fisica Nucleare); FLUMERFELT, Eric; HORTON--SMITH, Glenn (Kansas State University); MORESCALCHI, Luca (INFN Pisa & University of Siena); O'DELL, Vivian (Fermilab); PEDRESCHI, Elena; PEZZULLO, Gianantonio (Yale University); SPINELLA, franco (infn); UP-LEGGER, Lorenzo (Fermilab); RIVERA, Ryan (FNAL)

Presenter: GIOIOSA, Antonio (University of Pisa and INFN Pisa)
