# To Access the Internet...

---

1. Boot your computer, while in any area that is served by wireless at Fermilab, or bring a running system into such an area (e.g., the One West lecture hall).
2. Open a web browser. You will be redirected to a temporary registration page. Provide the registration and contact information -- **enter your name and CLASFF12 as the your contact.**

Your system will be scanned for vulnerabilities and viruses.

*The full scan may not be completed at this time: if many systems are registering at once, the system does not make you wait a long time before granting access. You may be informed that registration is in place but the scan was not completed. This is normal; the remaining less-critical scanning will occur while you are able to use the network.*

3. Renew your DHCP ID. The easy way to do that is to shutdown and restart your system.

To renew without having to reboot:

On Windows, open a command window and enter

```
ipconfig /release  
ipconfig /renew
```

On Unix or Linux or a Mac, enter

```
service network restart
```

***You will need to do this temporary registration each day.***
