

Global SMEFT Fits at Future Colliders

A Snowmass 2021 Whitepaper

JORGE DE BLAS^a, YONG DU^b, CHRISTOPHE GROJEAN^c, JIAYIN GU^d,
MICHAEL E. PESKIN^e, AND JUNPING TIAN^f

Contents

1	Introduction	7	Di-pole operators
2	Recap on SMEFT fits for ESG	8	The top-quark sector in the global EFT fit
3	Updated input measurements	9	Global fit results
4	Improved EFT analysis for $e^+e^- \rightarrow WW$	10	Discussion
4.1	EFT basis for $e^+e^- \rightarrow WW$	10.1	TGC and QGC in VBS
4.2	BR has no correlation?	10.2	Prospects for sensitivity at NLO
5	4-fermion operators	10.3	Synergy with low-energy measurements, EIC, Super-KEKB
6	CP-odd operators	10.4	Prospects at a photon collider and a muon collider
		11	BSM benchmark models
		12	Conclusions

still many open questions; welcome to join the team and to make your contribution
