

# STT Prototyping Activities

---

R. Petti

*University of South Carolina, Columbia SC, USA*

*SAND meeting  
October 26, 2021*

- ◆ *Setup with small (20cm × 20cm) straw tracker + VMM3a readout at RD51 testbeam:*
  - *Two double layers XX+YY with straws staggered by half diameter;*
  - *Independent tracking system with 3 GEM detectors ( $\sigma \sim 50\mu\text{m}$ ) equipped with VMM3 readout;*
  - *SRS readout system with Felix based DAQ.*
  
- ◆ *Ongoing testbeam at H4 CERN beamline (21 October - 7 November 2021):*
  - *High energy  $\mu, \pi$  with  $E \sim 160$  GeV;*
  - *STT setup installed in H4 beamline on 20 October (JINR);*
  - *Usable data taking from 25 October with all detectors working properly.*
  
- ◆ *Comparison with data taken in August 2021 using the different NA64 readout.*

# TIMING CALIBRATION

Vitalii Bautin (JINR)

## VMM3A TESTING

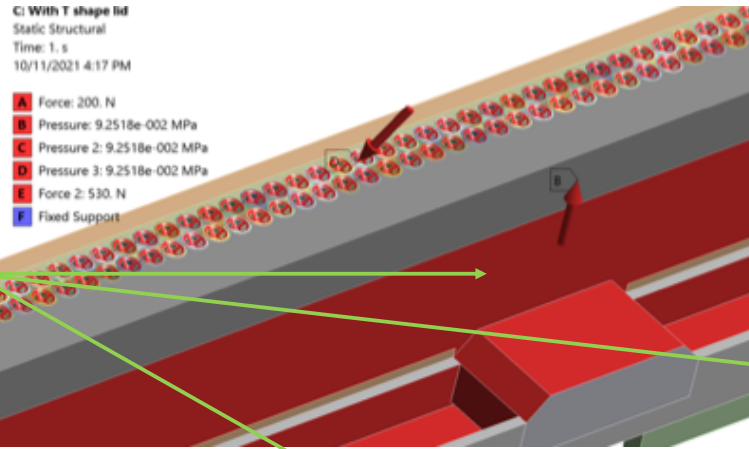

- ◆ Procedure to test and validate VMM3a ASICs used for 42,000 chips in ATLAS NSW

- ◆ Automatized VMM3a test stand
- ◆ Optical system to read serial numbers of the VMM3a chips being tested
- ◆ VMMT: multi-functional test board for testing and characterization of VMM3 ASICs developed by Tomsk State University (Russia) for ATLAS

- ◆ All VMM3a chips procured by UofSC tested at CERN using ATLAS NSW procedure: average yield about 70% for best selection (green) for a total of 150 chips.

- ◆ *Measurements of straw elongation and tension vs. internal gas pressure (GTU):*
  - *Straws with 4.9mm diameter, 12  $\mu\text{m}$  & 20  $\mu\text{m}$  walls, produced by ultrasonic welding;*
  - *Studied tension drop with increase of internal pressure starting from initial pre-tension.*
  
- ◆ *FE analysis of deformations induced by gas pressure, wire and straw tension:*
  - *Removable lids giving access to gas manifolds and FE boards, gas tightness (O-rings, etc.);*
  - *Connection of individual straws to C-composite frame and related gas sealing;*
  - *Study interplay between internal overpressure and wire/straw tension.*
  
- ◆ *Design of the prototype & mockup:*
  - *Prototype 1.2m  $\times$  0.8m in C-composite, based on design & parts as in full scale STT modules;*
  - *Mockup 35cm  $\times$  35cm in plexiglass, for preliminary validation tests.*
  
- ◆ *Procurement of components for the prototype:*
  - *Finalized straw parameters: 4.9mm external diameter, 20  $\mu\text{m}$  walls, COMET film (double Al?);*
  - *Mockup frame to be machined in plexiglass (Hamburg/DESY);*
  - *C-composite frame for prototype: evaluating vendors in USA, Italy, and India;*
  - *Options for manufacturing 1,500 endplugs: machining, 3D printing, injection molding.*

Applied pressure:  
0.092 MPa  
Applied Force:  
100N (for 336 wires)

Gas pressure only:

- +Z 0.032 mm
- Z 0 mm

Gas pressure + wire tension:

- +Z 0.02mm
- Z 0.0002mm

Gas pressure + wire tension

+ tension from straw walls:

- +Z 0.005mm
- Z 0.004mm

1.2 m x 0.8 m prototype

35 cm x 35 cm mockup

**Backup slides**

*JINR built 7 detectors 1.2 m x 0.6 m for NA64  
sent to CERN in August  
6 detectors will be on beam from October 29*

*Test of 5m long straws for SHiP at the University of Hamburg*

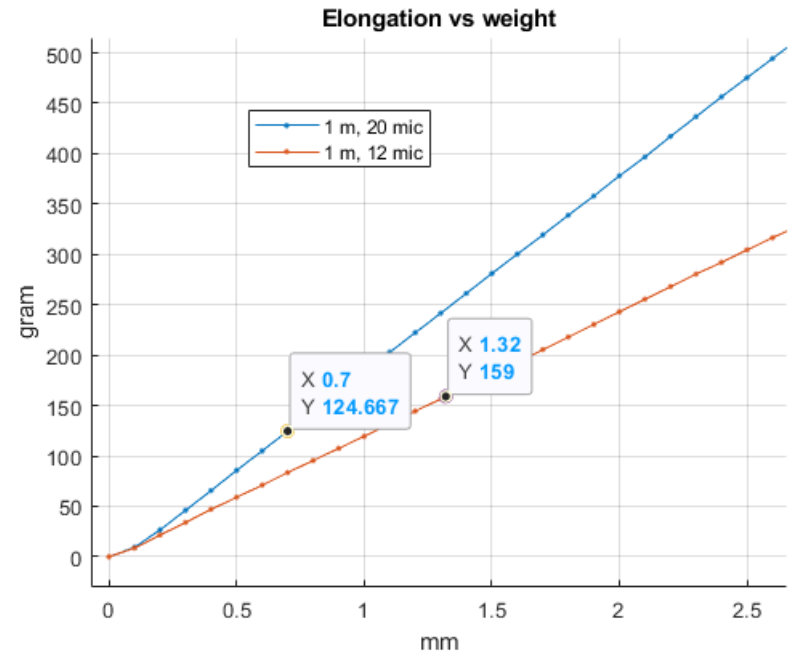

*Test of 1.8m long straws for STT  
at Panjab University*

Elongation of fixed tube based on pressure change

Tube elongation with weights with no pressure

*Measurement of elongation and tension with straws 1.0 m long, 5 mm diameter*

Straw numbers	Length	Diameter	Thickness	Elongation at 1 bar (relative)	Weight
1	1 m	5 mm	12 $\mu$ m	0.66 mm	78.5 g
1	1 m	5 mm	20 $\mu$ m	0.35 mm	56 g
1	0.5 m	5 mm	12 $\mu$ m	0.276 mm	35 g
1	0.5 m	5 mm	20 $\mu$ m	0.17 mm	44 g
400	1 m	5 mm	12 $\mu$ m		31.4 kg
400	1 m	5 mm	20 $\mu$ m		22.4 kg

*Expected maximal elongation for 4m long straws ~2.6 mm  
similar maximal frame deformation expected with assembly based on pressurized straws*

**B: Copy of Static Structural**  
Total Deformation  
Type: Total Deformation  
Unit: mm  
Time: 1  
7/12/2021 5:46 PM

Max deformation:  
Lid – 0.33mm  
Side panels – 0.13mm

## WIRING OF STRAWS

### ◆ *Consider a new wire support:*

- *“Twister” design used in ATLAS TRT can simplify wiring procedure;*
- *Wires can be replaced even after completion of module assembly;*
- *Increased mass & inefficiency (~ 7mm long).*

### ◆ *Old design of wire support:*

- *Minimized mass & inefficiency (3.5mm long);*
- *Wires cannot be replaced after module assembly is completed & end-plugs are sealed by epoxy.*

*ATLAS “twister”*

*Old wire spacer*

## EXISTING PROTOTYPE

*Prototype 50cm x 50cm tested at JINR with  
VMM3a readout FE boards from Mu2e Cathode Strip Chamber test stand (BNL)*

VMM3  
DAQ readout:  
 $^{55}\text{Fe}$  signal

*Validation of VMM3a readout with the prototype at JINR:  
signals from cosmic rays and  $^{55}\text{Fe}$  source with Ar/CO<sub>2</sub> 80/20  
using FPGA-based DAQ readout with existing VMM3 firmware+software*

*Monitoring of gas gain with increased gas flow up to 2,000 times nominal (JINR)*
