

TMS MAGNET UPDATE

ALEENA RAFIQUE
TMS Meeting
04/27/2022

MAGNETIC FIELD MAP

- More realistic magnetic field map has been produced by ANL engineering team
- The next step is to implement this into TMS simulation software
 - TMS current software assumes 1 T constant field throughout the detector
- The initial B-field map file had some problems (missing rows, duplicated values) that has now been corrected

SAMPLE GENERATION

- Made a new geometry file that includes the B-field map file instead of the constant 1T field.
 - `/dune/app/users/arafique/ND_production/ND_Production/scripts/job_submit/nd_hall_with_lar_tms_nosand_Bfield.gdml`
- Generated ~3500 events (POT 1e16) with top volume “volArgonCubeDetector75”
- Ran edep-sim through following geometries having:
 - No B-field at all
 - 1T constant field
 - More realistic B-field map
- ~1500 events have charge deposition inside TMS

EVENT DISPLAYS

Without B-field

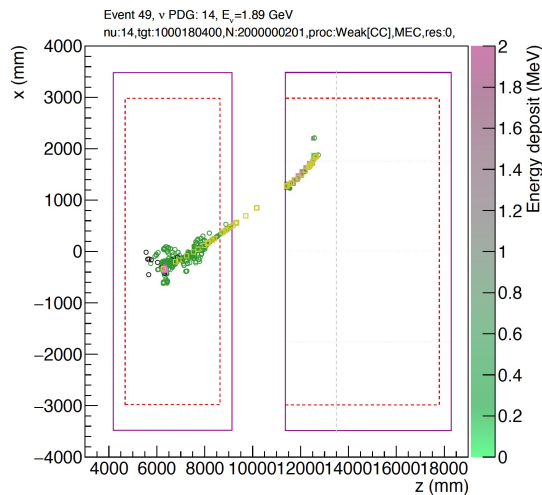

With a constant $B = 1\text{ T}$

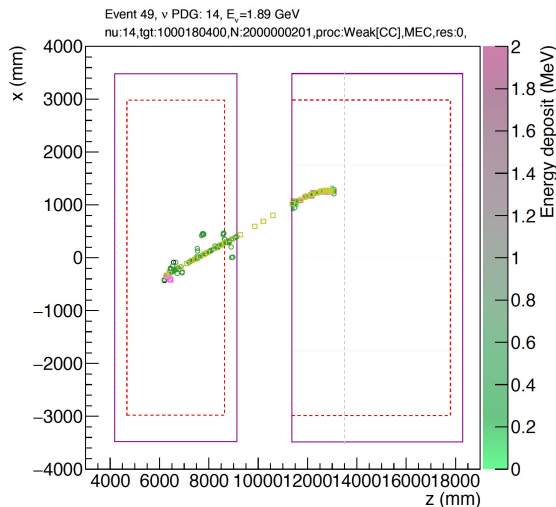

With B-field map

EVENT DISPLAYS

Without B-field

With a constant $B = 1\text{ T}$

With B-field map

EVENT DISPLAYS

Without B-field

With a constant $B = 1\text{ T}$

With B-field map

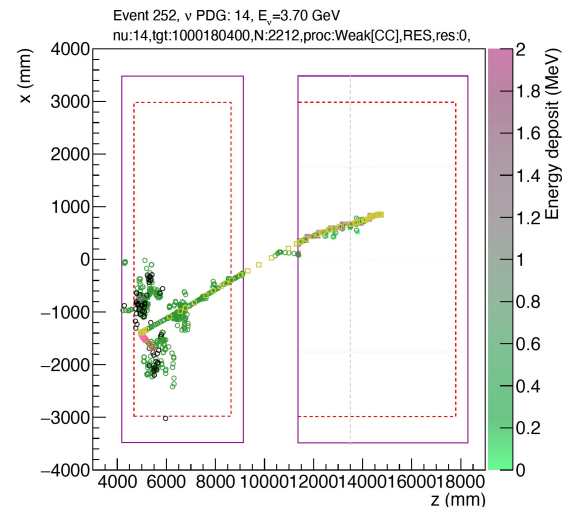

EVENT DISPLAYS

Without B-field

With a constant $B = 1\text{ T}$

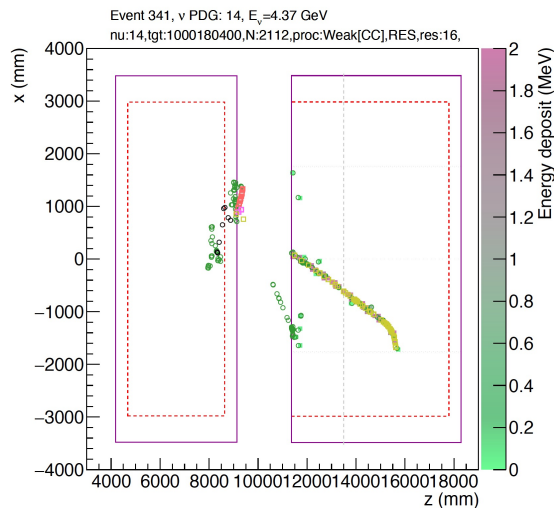

With B-field map

EVENT DISPLAYS

Without B-field

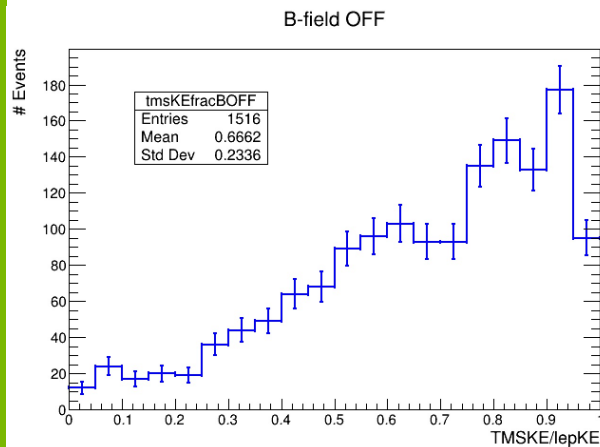

With a constant $B = 1\text{ T}$

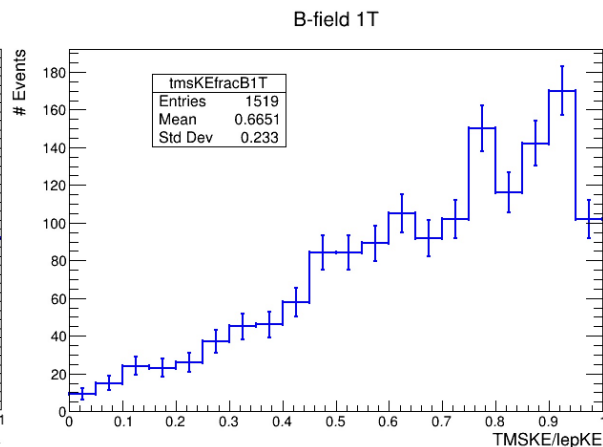

With B-field map

TMS KINETIC ENERGY FRACTION

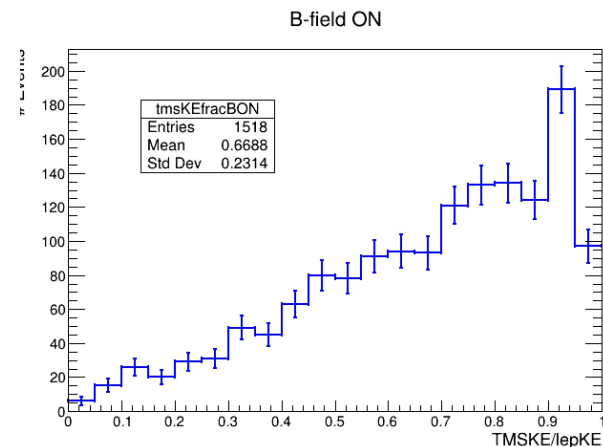

- Ran the “dumpSSRITree.py” on the edep-sim files.
- Plotted fraction of TMS KE over leptonic KE on event-by-event basis

Without B-field

With a constant B = 1T

With B-field map

TMS KE 2D PLOTS

Looking for a metric such as energy resolution etc to compare results from with/without B-field map.
