

New Constraints on New Explanations of the MiniBooNE Anomaly

Wednesday, 22 June 2022 09:15 (25 minutes)

In this talk, I will describe some of the latest constraints on new explanations of the MiniBooNE excess. I will focus on results using the T2K near detector, CHARM, and Minerva. I will present results for both dark neutrino scenarios and neutrino dipole interactions.

Presenter: ARGUELLES-DELGADO, Carlos (Harvard University)
