

Cross Section/Flux Group

- start tabulating information from our “proposal vs. reality” case examples (MiniBooNE and MINOS, appearance and disappearance)
 - do we have the information we need? are there any gaps?
- finalize table of expected status of relevant measurements in the near term and additional input needed in the future
 - have a start at this in the interim report which we need to finalize & expand
 - decide on best way to present: table and/or plot?
- as part of this, need to finish several presentations we had planned:
 - status of ν_e cross section measurements (K. McFarland)
(plan B would be to ask for advance copy of their paper)
 - MiniBooNE systematic error discussion (C. Polly)
