

We are pleased to announce the dates for this year's Workshop on Medical Device Sterilization on **September 20 and 21, 2023** hosted by Fermilab.

This will be a hybrid event with both in-person and online possibilities.

Morning (US Central Time) presentations will be broadcast, and Q&A will be available to both virtual and in-person attendees. Presentations will again include participation from medical device manufacturers, sterilization service providers, and the FDA (including additional information on how to better communicate with regulators). In-person attendees will also be able to participate in afternoon breakout sessions, offline conversations during breaks and lunch, tours of select Fermilab locations, and an evening no-host social networking gathering.

We apologize for the delay in putting together the summary report from last year. It is included with this email and is now on the [site](#) from last year's meeting.

**Important schedule and logistical notes:**

- In-person registration will be limited to 150 persons.
- The cut-off for in-person registration will be August 23.
- The cut-off for virtual registration will be September 6.
- Accessing the Fermilab site has had significant changes:
  - In-person attendees will have to closely follow additional steps to register to allow on-site attendance.
  - This will include specific instructions for arrival at the Fermilab gates.

We appreciate your interest in this workshop and will be following up with more information and a link to this year's website in the next month or so.

The Workshop Team

[Tom Kroc](#), Fermilab

[Debbie Cotton](#), Retired

[Vu Le](#), Abbott Labs

[Mark Passmore](#), Baxter Healthcare

[Mara Senescu](#), Baxter Healthcare

[John Williams](#), Medtronic
