

SP PHOTON DETECTION CONSORTIUM

AUGUST 30, 2022

Collaboration Meeting

- Next Collaboration meeting will be held in Manchester on September 12-16
- The format of this CM will be very different from what was in the past. In particular the number of parallel sessions is very much reduced and will be limited to two half days.
- There will be 2 and $\frac{1}{2}$ days of plenary sessions (Monday, Friday and Wednesday afternoon). Two half days are reserved for in person, self organized, meetings (Tuesday morning and Thursday morning).
- The PD Consortium asked for 4 parallel sessions:
 - General PD Consortium
 - PD – VD
 - Physics and Simulation
 - ProtoDUNE
- We have been assigned two plenary talks (15 min): one for the HD and one for the VD. They need to be informative for the entire Collaboration.

Today meeting

- Status and plans for DAPHNE (Manuel)
- ProtoDUNE update (Miguel, Niccolò)
- VD update (Franciole)
- Monitoring system (Zelimir/David)
