

Updates on 1 GeV beam π^+ -Ar inclusive cross section measurement

Yinrui Liu
Sept. 1, 2022

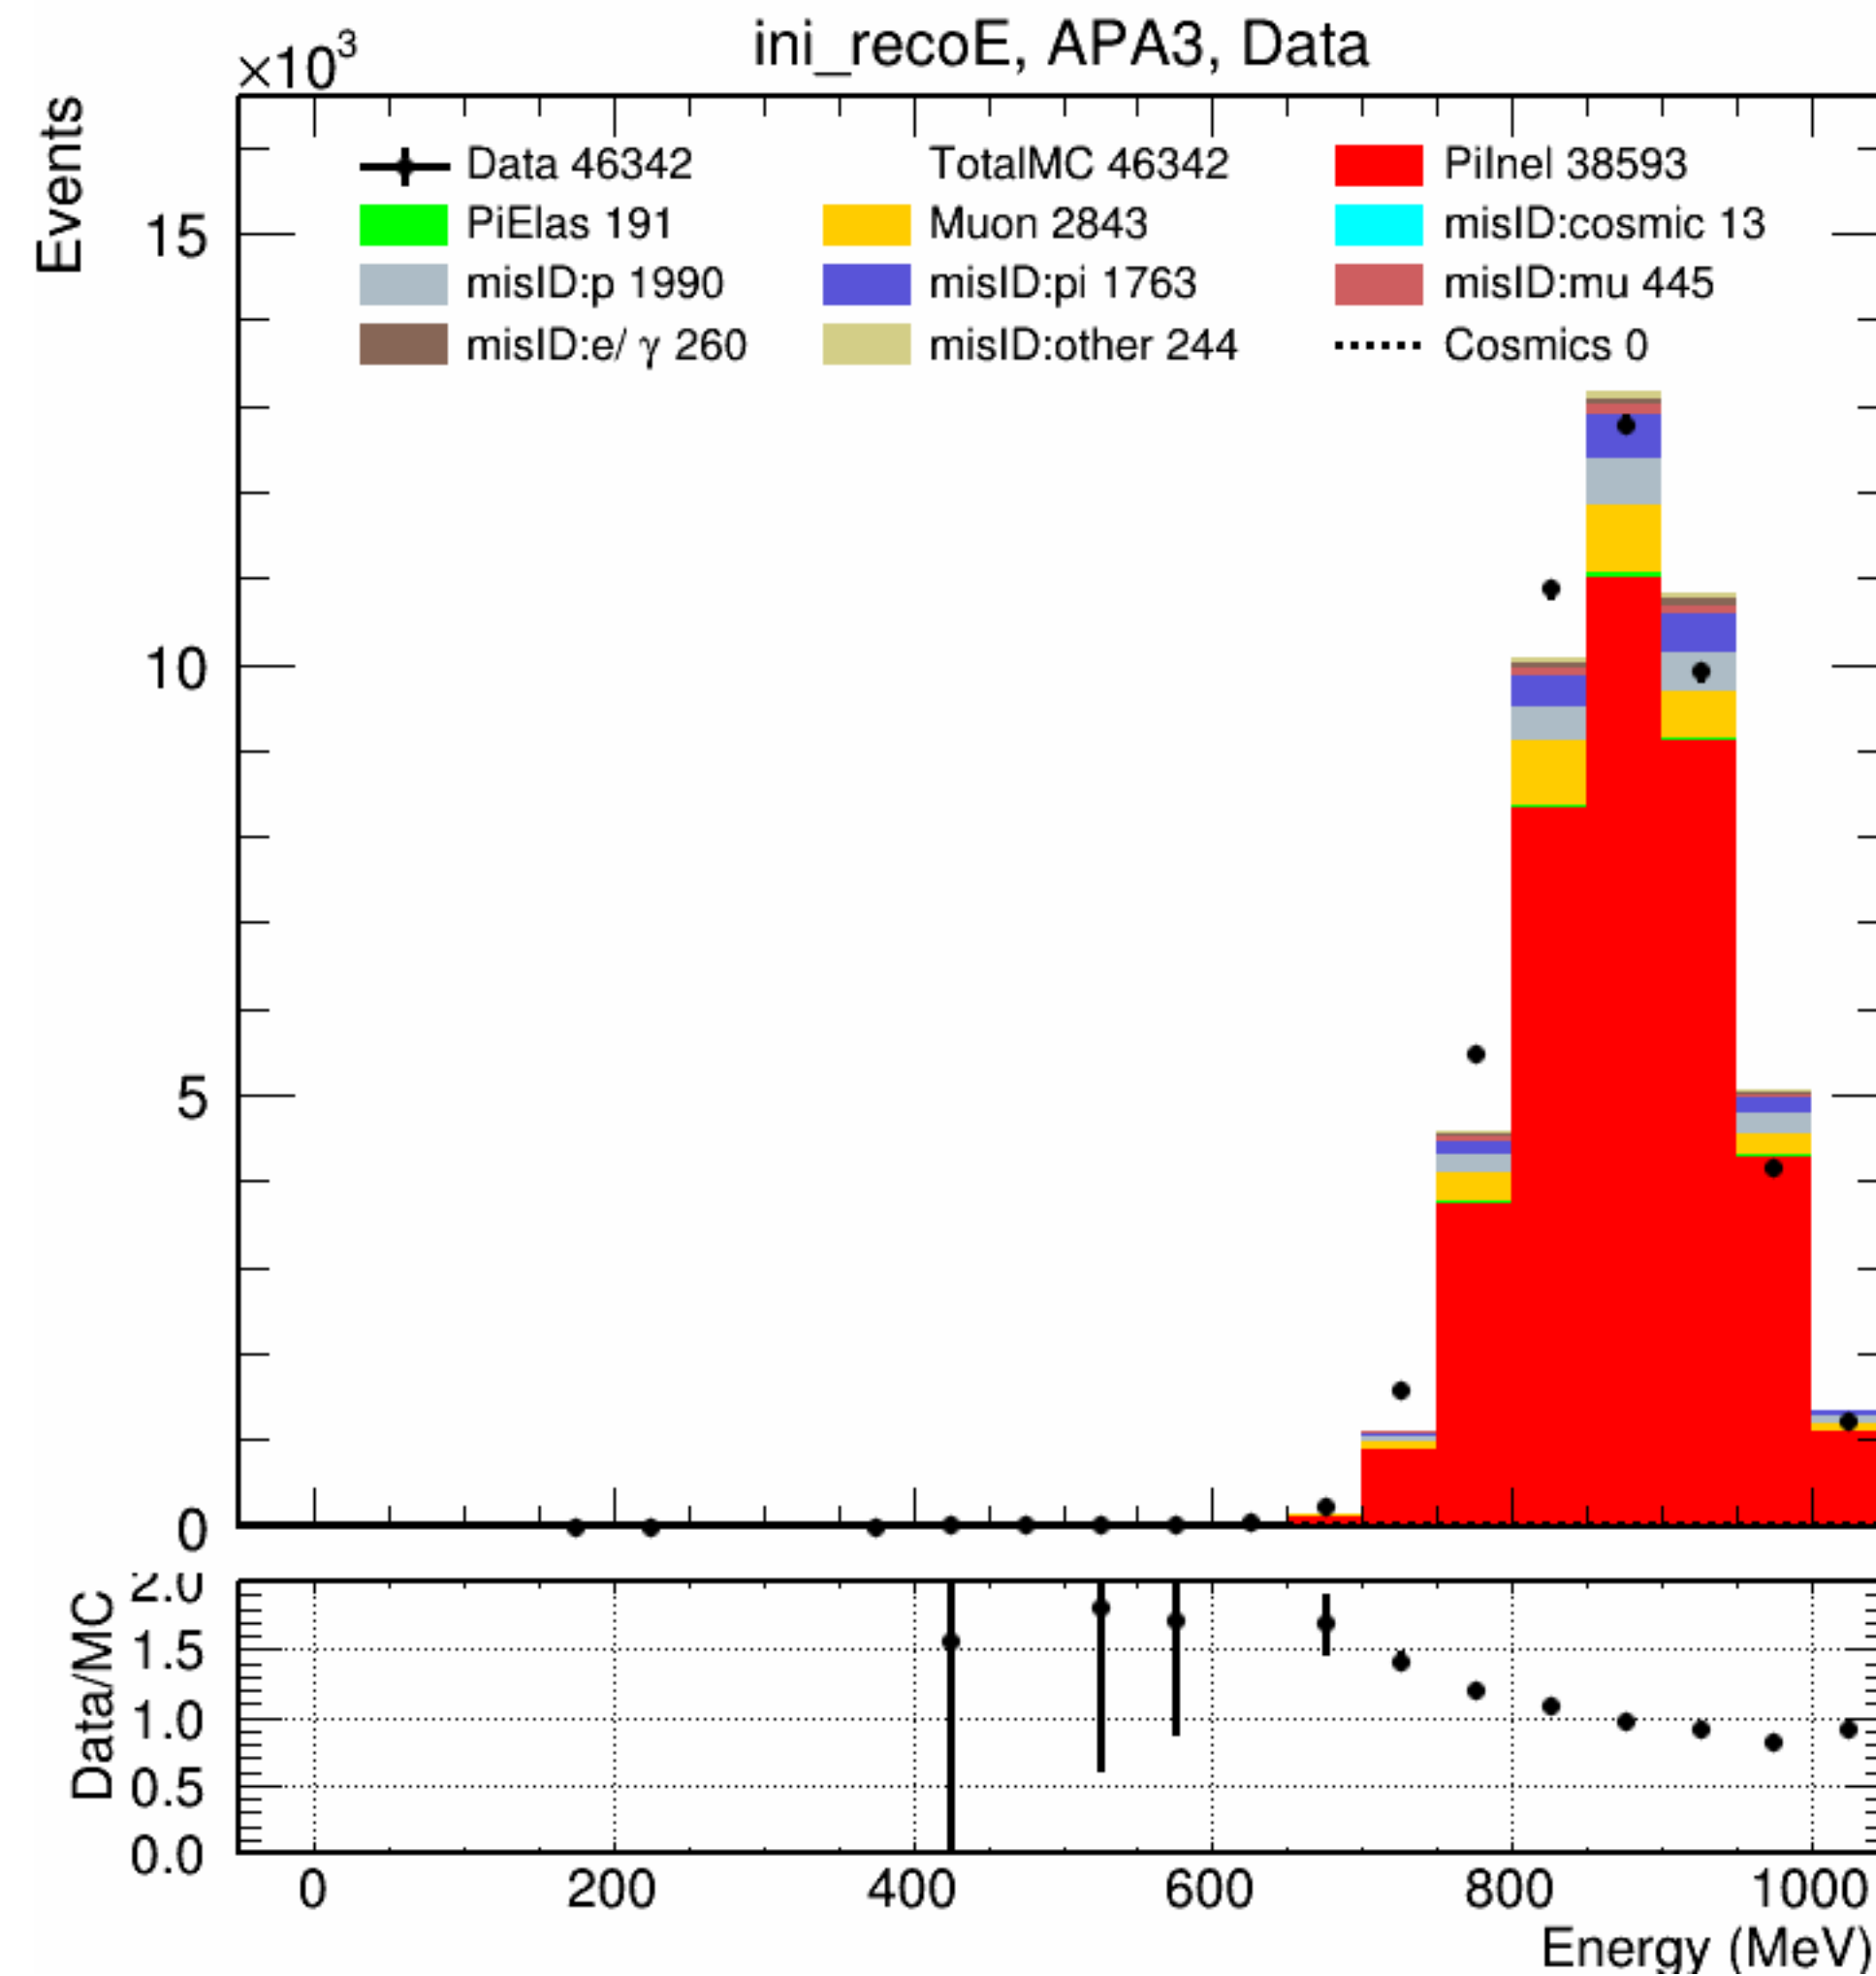

After full selections (including APA3 cut)

Initial and interaction E comparisons of MC and real data

After full selections (including APA3 cut)

Wider bins (50 MeV)

MC true KE

MC reco KE

Data reco KE

MC KE calculated by true length

MC KE calculated by reco length

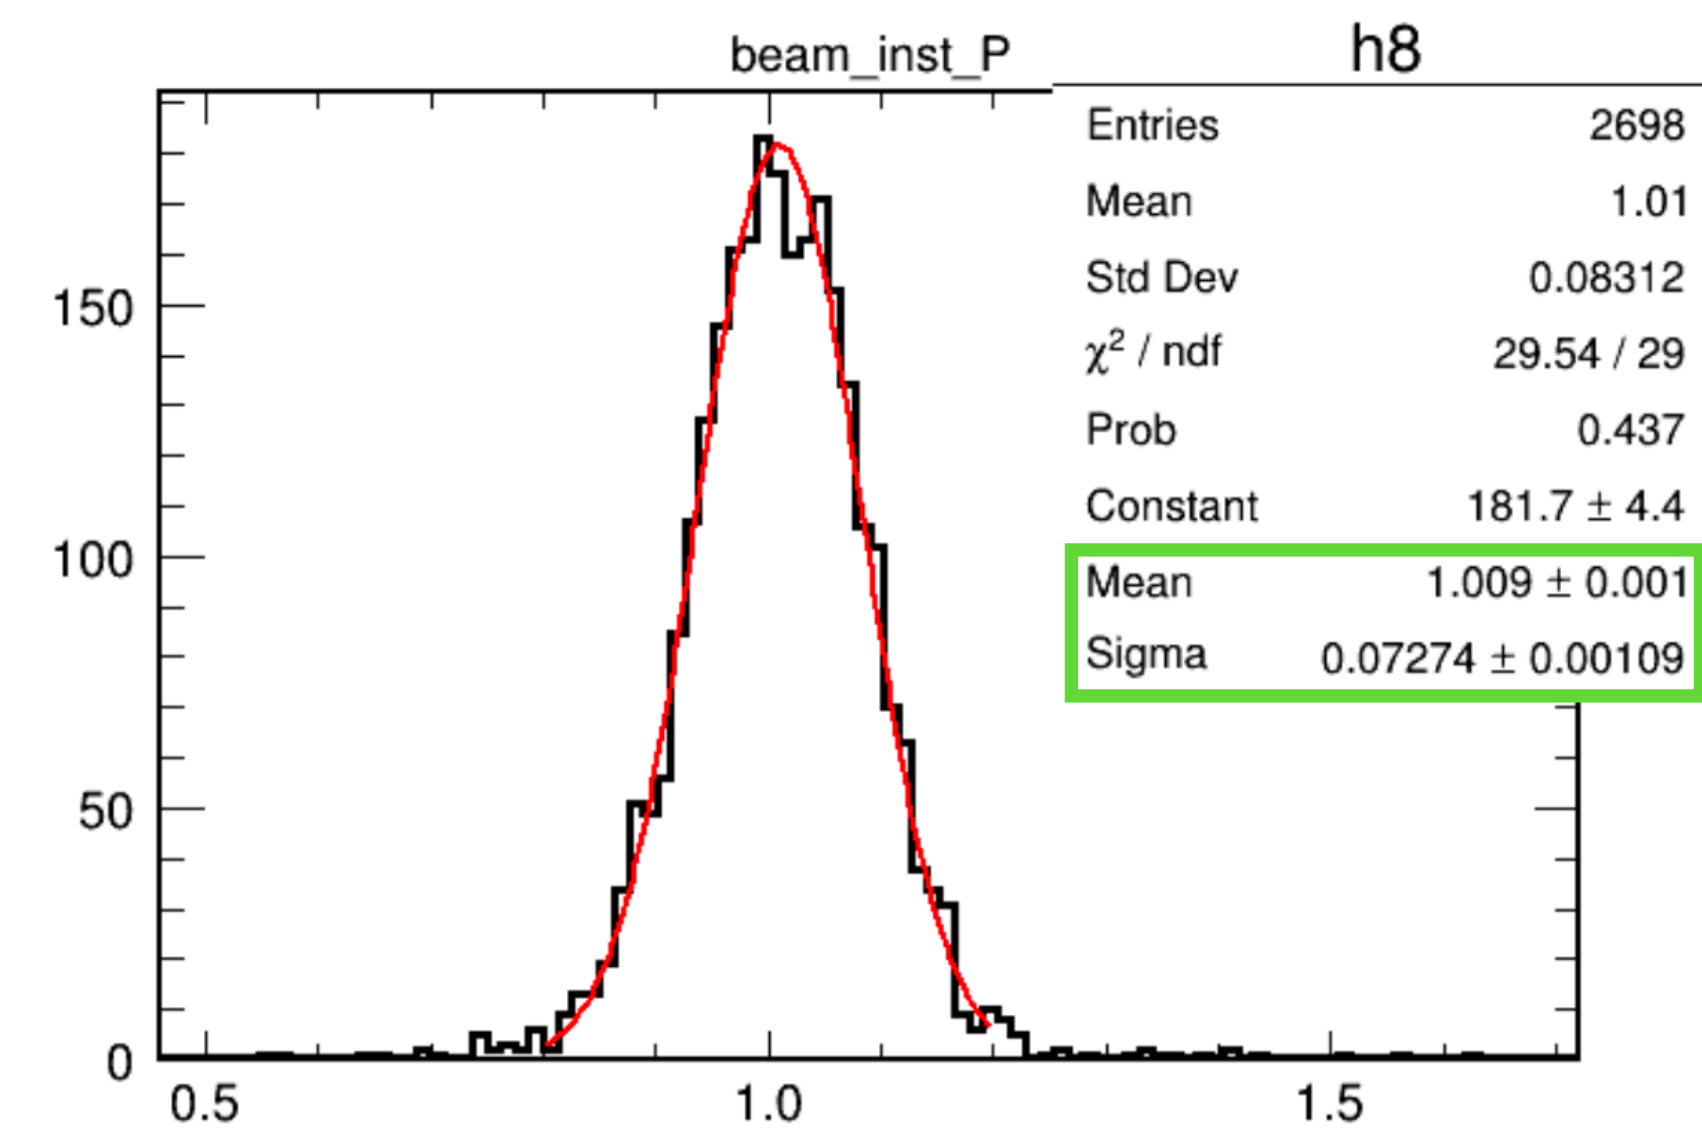

Data KE calculated by reco length

Difference in upstream E loss

Gaus(-9.85, 17.756843) MeV

Extra smearing

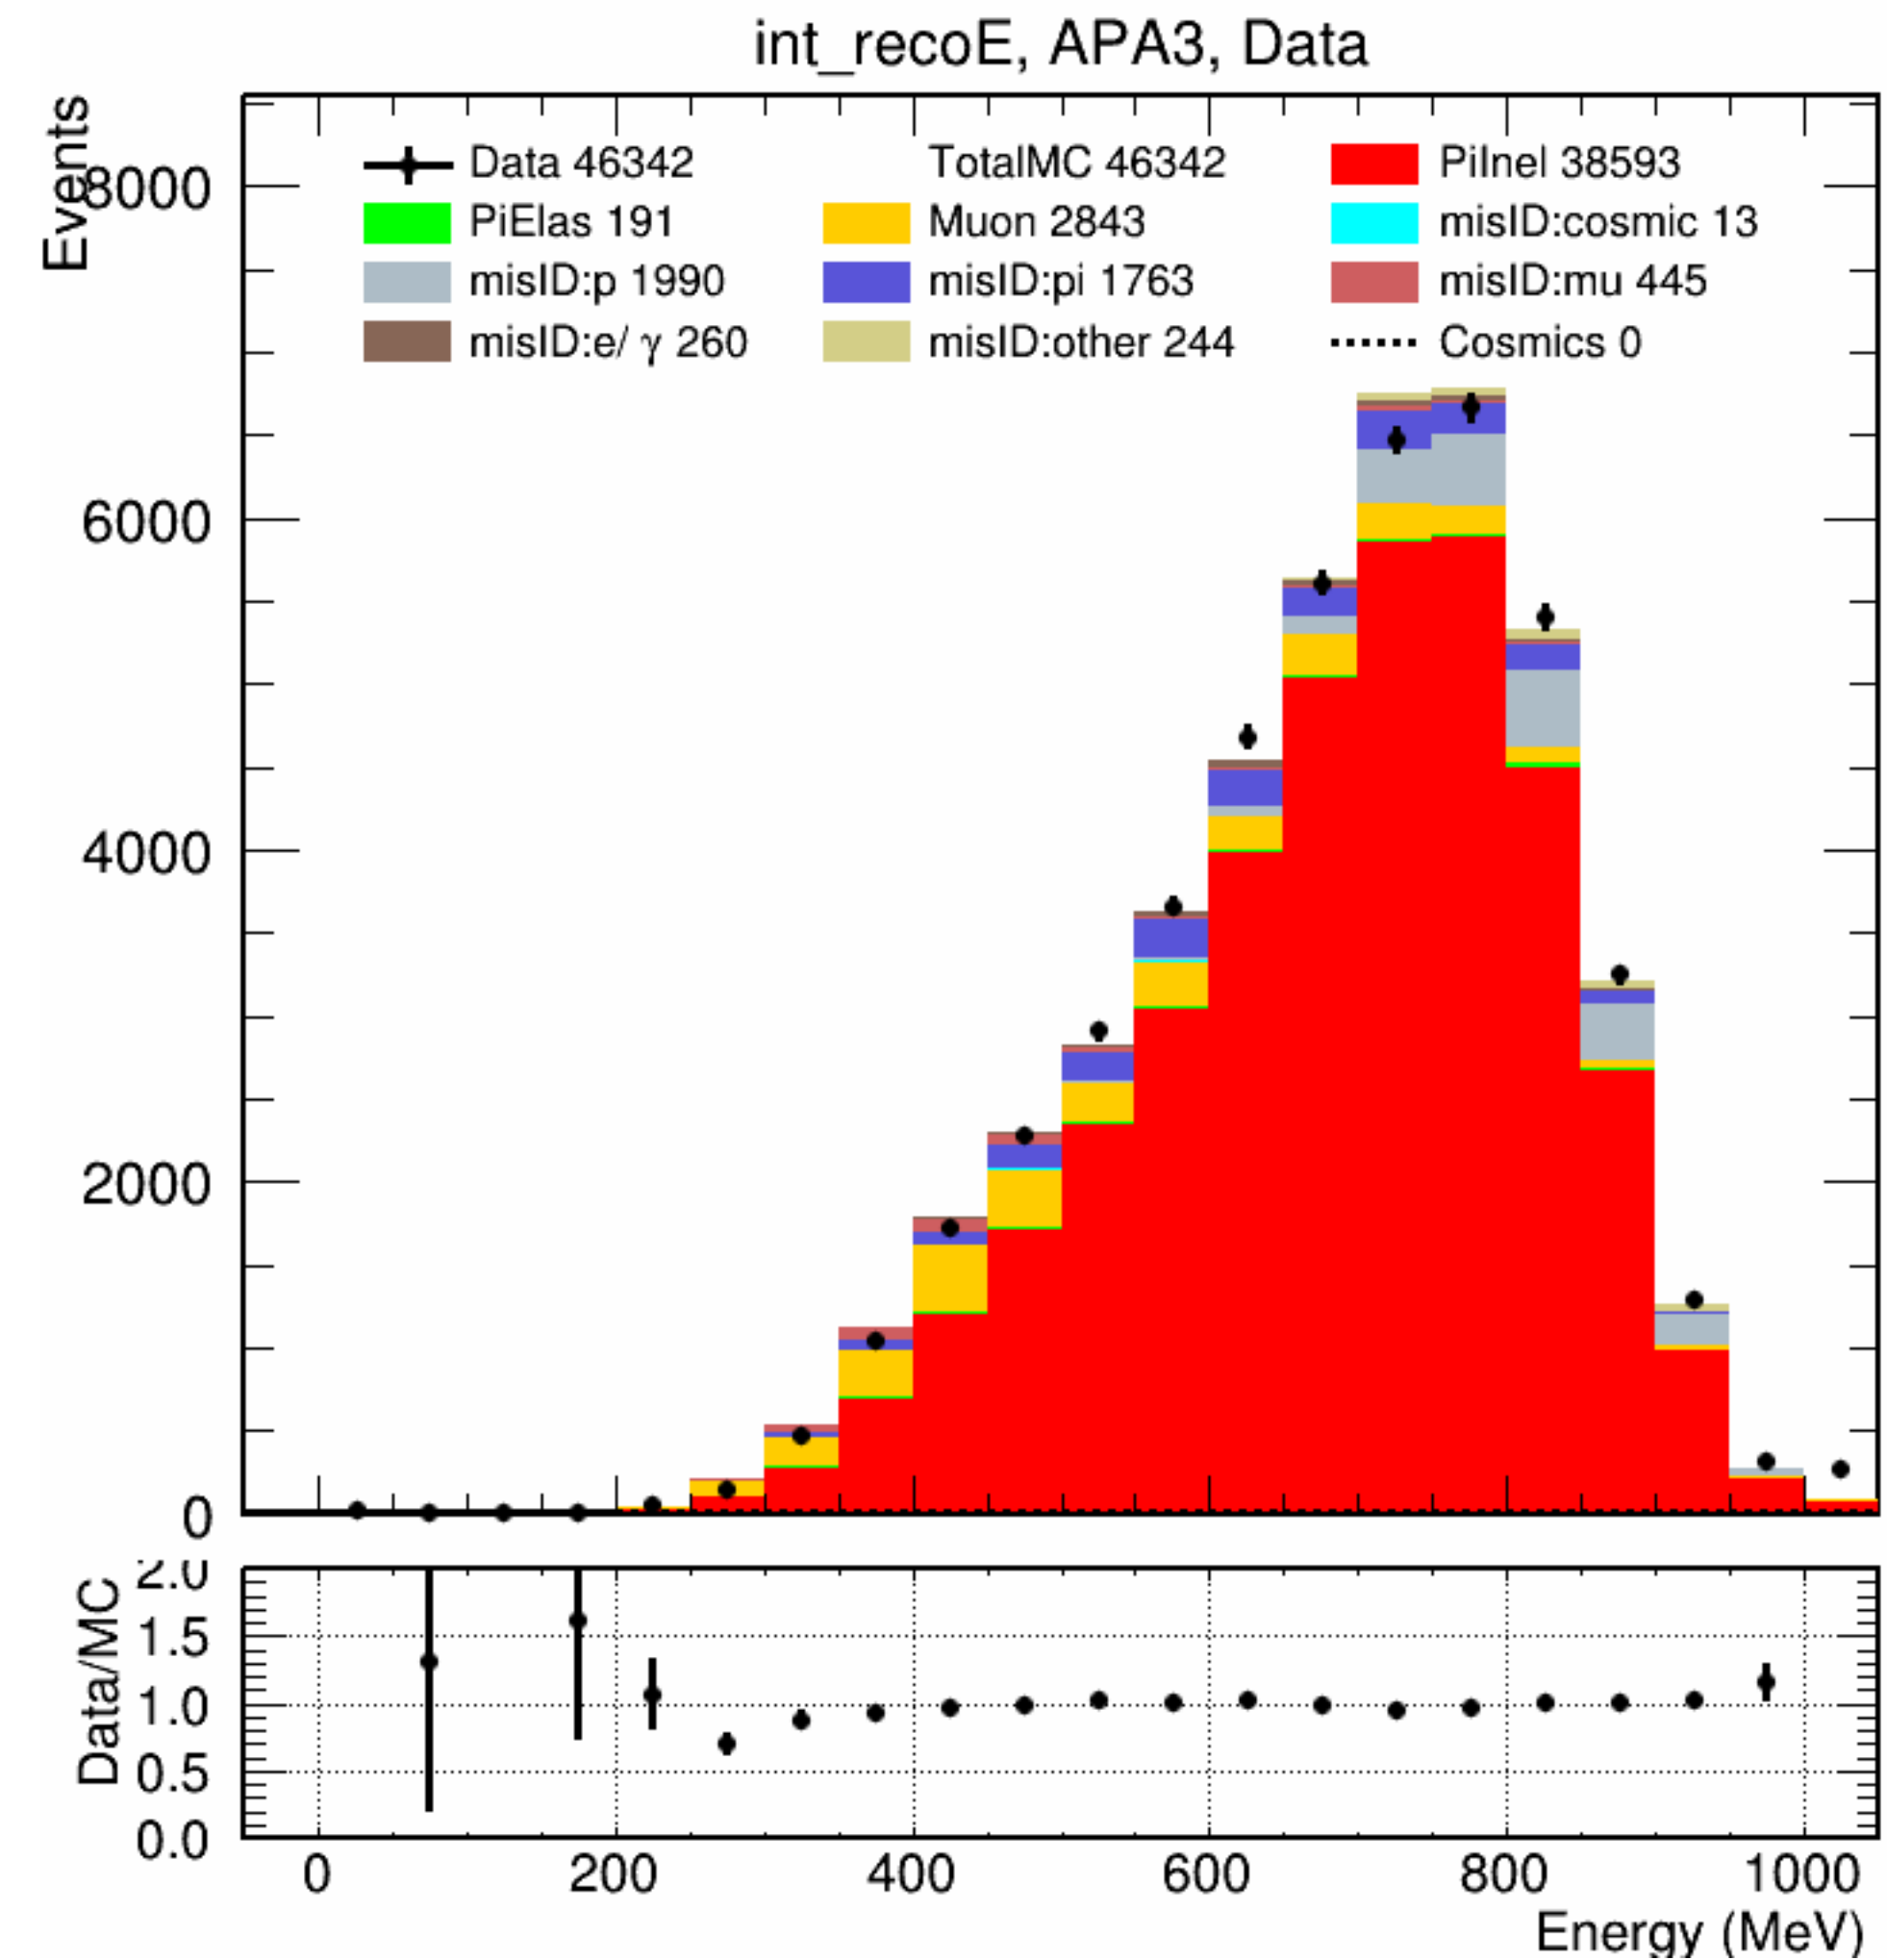

MC beam momentum

MC reweighted beam momentum

Data beam momentum

After full selections (including APA3 cut)

MC beam_inst_P add Gaus(-9.85, 17.756843) MeV

Error propagation

- Jacobian matrix $J = \begin{pmatrix} \frac{\partial f_1}{\partial x_1} & \dots & \frac{\partial f_1}{\partial x_n} \\ \vdots & \ddots & \vdots \\ \frac{\partial f_m}{\partial x_1} & \dots & \frac{\partial f_m}{\partial x_n} \end{pmatrix}$
- Covariance matrix $V = \begin{pmatrix} \sigma_{11} & \dots & \sigma_{1n} \\ \vdots & \ddots & \vdots \\ \sigma_{n1} & \dots & \sigma_{nn} \end{pmatrix}$
- $V_f = J \cdot V_x \cdot J^T$

**Covariance matrix provided by the 3D
unfolding of $(N_{\text{ini}}, N_{\text{end}}, N_{\text{int}})$**

Error propagation

- $N + 1$ is the number of bins (plus one unphysical underflow)
- $A_{(N+1)^3 \times (N+1)^3}$ for the combined variable $(N_{\text{ini}}, N_{\text{end}}, N_{\text{int}})$ is provided by unfolding
- $B_{3(N+1) \times 3(N+1)}$ for $N_{\text{ini}}, N_{\text{end}}$ and N_{int} e.g. $N_{\text{ini}} = \sum_{N_{\text{end}}, N_{\text{int}}} (N_{\text{ini}}, N_{\text{end}}, N_{\text{int}})$
- $C_{2N \times 2N}$ for N_{inc} and N_{int} (leave out the underflow bin)
- $N_{\text{inc}}(i) = \sum_{j=i}^N N_{\text{end}}(j) - \sum_{j=i+1}^N N_{\text{ini}}(j)$ or $N_{\text{inc}}(i) = \sum_{j=1}^i N_{\text{ini}}(j) - \sum_{j=1}^{i-1} N_{\text{end}}(j)$
- $D_{N \times N}$ for XS: $\sigma = \frac{M_{\text{Ar}}}{\rho N_A \Delta E} \frac{dE}{dx} \ln \left(\frac{N_{\text{inc}}}{N_{\text{inc}} - N_{\text{int}}} \right)$

Fake data

3D unfolding 10 iterations

Initial histogram

Interaction histogram

Incident histogram

Fake data

3D unfolding 10 iterations

Fake data

3D unfolding 200 iterations

Correlation matrix for reco XS

Correlation matrix for true XS

Real data

Muon scaling factor: 0.60 ± 0.13
Proton scaling factor: 1.80 ± 0.15
Pion scaling factor: 1.45 ± 0.14

- After bkg subtraction

Real data

- After unfolding

$$\text{diag}\{\dots\} \rightarrow \text{diag}\{\dots\} \rightarrow$$

Some notes for error propagation

$$\sigma = \underbrace{\left(\frac{M_{Ar}}{\rho N_{Ar} \Delta E} \frac{dE}{dx} \right)}_C \ln \frac{N_{inc}}{N_{inc} - N_{int}} \quad \times 5 \quad \left(\overbrace{\frac{\partial \sigma}{\partial N_{inc}}}^{N_{inc}} \quad \overbrace{\frac{\partial \sigma}{\partial N_{int}}}^{N_{int}} \right)$$

$$\frac{\partial \sigma}{\partial N_{inc}} = C \cdot \frac{\cancel{N_{inc} - N_{int}}}{N_{inc}} \cdot \frac{\cancel{N_{inc} - N_{int}} - \cancel{N_{inc}}}{(N_{inc} - N_{int})} = C \cdot \frac{-N_{int}}{N_{inc} (N_{inc} - N_{int})}$$

$$\frac{\partial \sigma}{\partial N_{int}} = C \cdot \frac{\cancel{N_{inc}}}{\cancel{N_{inc}} (N_{inc} - N_{int})} = C \cdot \frac{1}{N_{inc} - N_{int}}$$
