

Test beam / ITA Status

Joe Pastika

Proton PMG

3 November 2022

FTBF Status

- Coming beam schedule for MTest will be very full
 - We have full scheduled from November 9 2022 through July 7 2023
 - Starting initial group installs and preparing for ORCs
- MI-52 breaker replacement is a major concern for us
 - Estimated beam in MTest week of 28th
 - Switchyard commissioning still required after MI-52 breaker replacement
 - Contacting groups who will loose time, hard to accommodate with full schedule
- JGG magnet refurbishment continuing
 - ~2 weeks of work
- TOAD pressure is onsite
 - High pressure gas TPC tests in MCenter
 - Currently in DAB, will be installed in MCenter

ITA status

- First users are starting formal planning
- Primary MTA beamline being approved for operation
 - Delay in beamline operation approval from non-operating ventilation fan
 - fan operating again and new procedure in place to check fan is operating before experimental approval
 - Engineered solution in works to allow automated monitoring of fan by MCR
