

Crisis in BSM??!!??

# Crisis in BSM??!!??

- I met Carlos and Marcela in the summer of 1997 while I was a summer student at CERN working in the ATLAS collaboration (after that I was not allowed to be close to an experiment any more.....)

# Crisis in BSM??!!??

- I met Carlos and Marcela in the summer of 1997 while I was a summer student at CERN working in the ATLAS collaboration (after that I was not allowed to be close to an experiment any more.....)
- They have always helped me succeed, we have published several papers, we have shared lots of memories, so....
- ¡GRACIAS!

- Model building has been in a minor crisis for the last decade or so.
- The LHC has been a success, let us always remember that.
- The SM is incomplete, we need to explain, at least, DM....
- And we have flavour, inflation, hierarchy problem, gravity.....

- Without experimental hints of BSM (yes, we have some  $2\sigma$ ) we have to think, think and think about new ideas to understand the open problems within the SM.
- I still think that there is a lot to learn in particle physics.
