Office of  
Science

# What is “opi-generator”?

- The name of a Python project, could be installed via “[pip install opigen](#)”
- **opi-generator** is forked from **cssgen**
- Generating XML files for CS-Studio as OPI screens from Python scripts
- Consistent screen styles for both CS-Studio and Phoebus
- Managing screen styles in a unified approach, supports user-customization

- 
- CS-Studio : CS-Studio based on Eclipse
  - Phoebus: CS-Studio based on Phoebus

# Why “opi-generator”?

- Streamline the OPI screen development: unified styles, minimize the maintainence effort
- Generating OPI screens instead of “drawing” → pixel-level controllable
- Existing packages only tackle one platform, either CS-Studio (Eclipse) ([cssgen](#)) or Phoebus ([phoebusgen](#))
- As of now, FRIB is using both CS-Studio and Phoebus, next Debian OS (12) does not work with CS-Studio (Eclipse)
- Last commit of [cssgen](#) is 6 yrs ago, not fully support CS-Studio (Eclipse), requires significant effort to make it work for most of the widgets, however “opi-generator” borrowed the idea of how it handles XML.
- Started to refactor “cssgen” to make it support both CS-Studio and Phoebus, [opi-generator's commit of defaec@2022/07/21](#)
- Developed unittests, set up CI workflow for PyPI package publish, and use it to generate OPI files for both CS-Studio and Phoebus

# A Simple Example

```
4 from opigen import Renderer
5 from opigen import widgets
6 from opigen.contrib import TextUpdate, Display
7
8 data = [
9     ('LS1_CA01:BPM_D1129', 'VA:LS1_CA01:BPM_D1129:X_RD', 'VA:LS1_CA01:BPM_D1129:Y_RD'),
10    ('LS1_CA01:BPM_D1144', 'VA:LS1_CA01:BPM_D1144:X_RD', 'VA:LS1_CA01:BPM_D1144:Y_RD')
11 ]
12
13 # widget position, size controls
14 height = 25
15 hgap, vgap = 5, 5
16 w_name, w_xpos, w_ypos = [200, 60, 60]
17
18 # name column
19 x_name, y0 = 5, 5
20 # xpos column
21 x_xpos = x_name + w_name + hgap
22 # ypos column
23 x_ypos = x_xpos + w_xpos + hgap
24
25 # screen as the root node
26 screen = Display(800, 600, "BPM Readings")
27 # place widgets
28 for name, xpv, ypv in data:
29     name_lbl = widgets.Label(x_name, y0, w_name, height, name)
30     x_rd_text = TextUpdate(x_xpos, y0, w_xpos, height, xpv)
31     y_rd_text = TextUpdate(x_ypos, y0, w_ypos, height, ypv)
32     screen.add_children([name_lbl, x_rd_text, y_rd_text])
33     # next row of widgets
34     y0 += height + vgap
35
36 # render the screen
37 r = Renderer(screen)
38 r.to_opi("01.opi") # for CS-Studio
39 r.to_bob("01.bob") # for Phoebus
```

# Unified Styles: Font, Color, Banner, ...

- Control Fonts, Colors through configuration files, system-wide/user-defined (overrides), etc.
- Dedicated modules to produce the banner to embed

```
1 #
2 # lines starts with # or // will be skipped
3 # CS-Studio (.opi) supports both font size in pt and px
4 # Phoebus (.bob) only support px
5 #
6 # Name          Family          Style          size (boy), size (phoebus)
7 Title           = Liberation Serif - bold    - 24 pt, 28
