Ophyd v2

Wednesday, 26 April 2023 15:36 (5 minutes)

Diamond are working on developing Ophyd v2, part of the Bluesky framework. Ophyd v2 uses lessons learnt from Ophyd and Malcolm, the hardware scanning engine at DLS. The key design concerns are modularity, separation of logic and I/O, easy to implement hardware triggered scanning solutions and a clear migration path.

Please select if talk will be in person or on zoom

In person

Primary author: MERCADO, Ronaldo (Diamond Light Source)

Presenter: MERCADO, Ronaldo (Diamond Light Source)

Session Classification: Plenary Session: Lightning Talks

Track Classification: EPICS Control System Architecture
