Some code issues – 1 python tools

- People sometimes want/need pip products.

- Can we think about having a shared (maintained) area for the most popular ones?

- In my own area

```
which python

/cvmfs/larsoft.opensciencegrid.org/products/python/v3_9_2/Linux64bit+3
.10-2.17/bin/python

pip install matplotlib --target=$DBLUE/pip --upgrade

export PATH=${PATH}:$DBLUE/pip/bin

 export PYTHONPATH=${PYTHONPATH}:$DBLUE/pip
```

Can we make a "product" or a maintained area in cvmfs for these things

jobsub_lite?

- I think this isn't an issue now. But we may need to think about changes to the setup to support tokens, different VO's, non-FNAL identities.
