Token Weakening in jobsub_lite

Marc Mengel, Shreyas Bhat
April 2023

Token Weakening

- Review:
  - With this feature (coming in jobsub_lite 1.3)
    - Jobs are submitted with a "weakened" token scope
    - `storage.modify` scopes are cleared
    - `--need-storage-modify /exp/dir/subdir` flag adds specific subdirectories with `storage.modify` to token scope
- Timeline
  - Releasing to experiment test machines April 19th
  - Releasing generally May 3rd
- Recommendations
  - Add `--need-storage-modify` flags **now**
    - They do not do anything yet, but are accepted
    - Preferably with specific subdirectories
