

Cosmic Muon Test Setup (TTU)

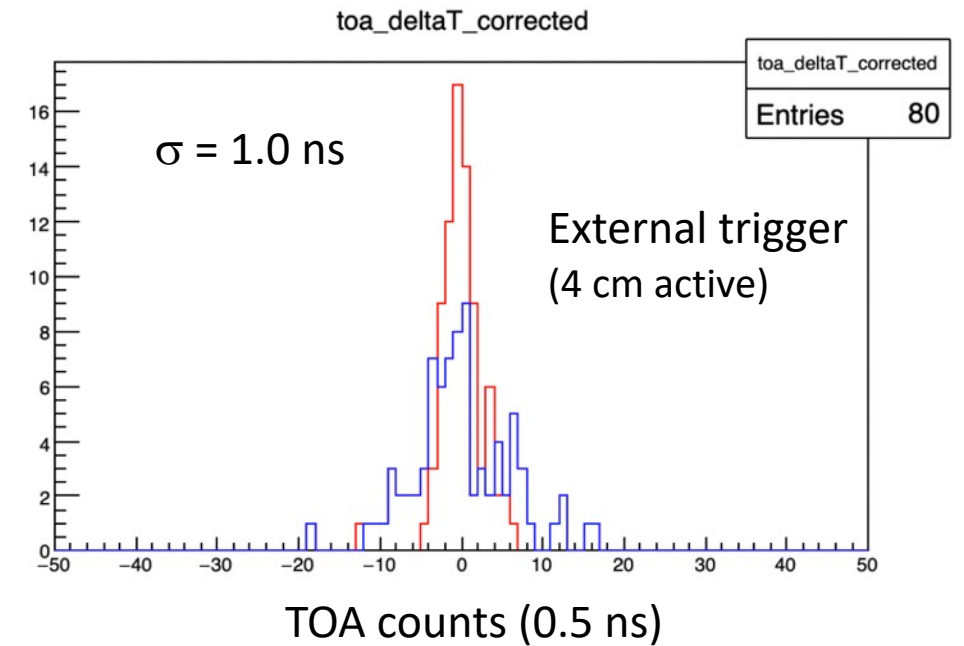

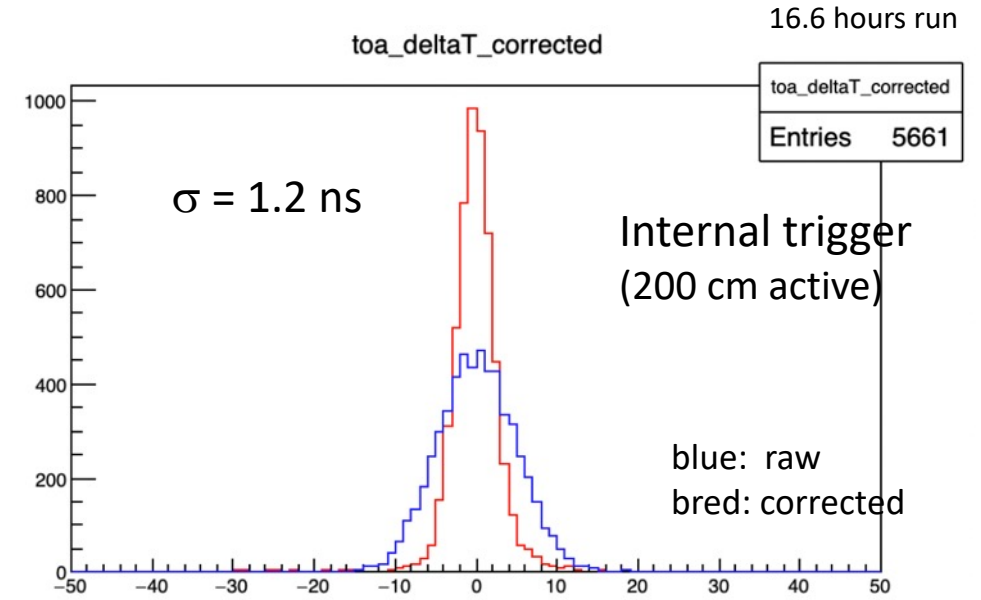

Triggers:
 (1) External: S1*S2
 (2) Internal: TOP(OR32) * BOT(OR32)

Cosmic Muon Events

$$\delta T = T(i) - T(\text{mean})$$

TOA correction with TOT

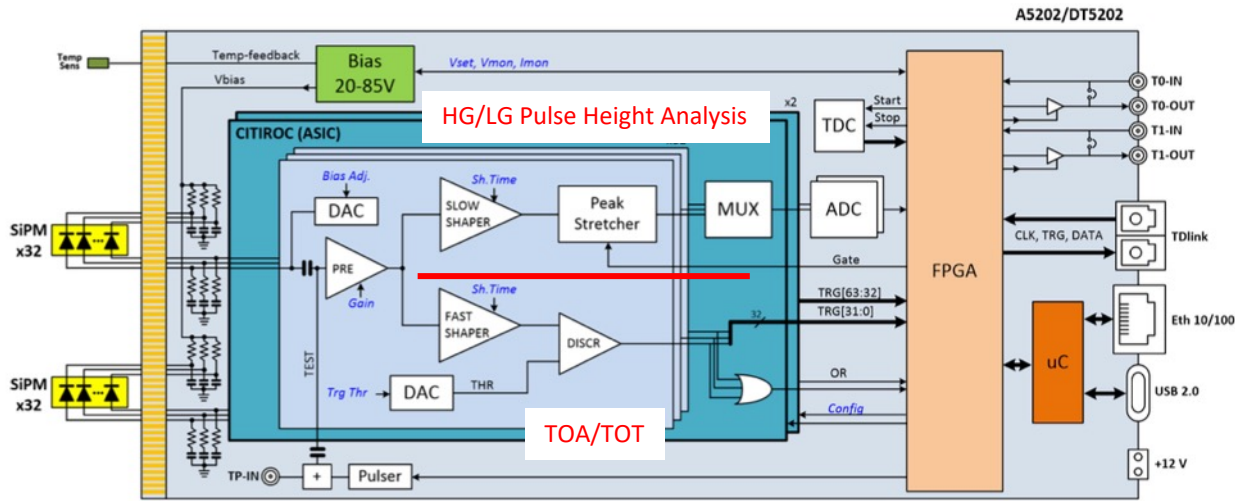

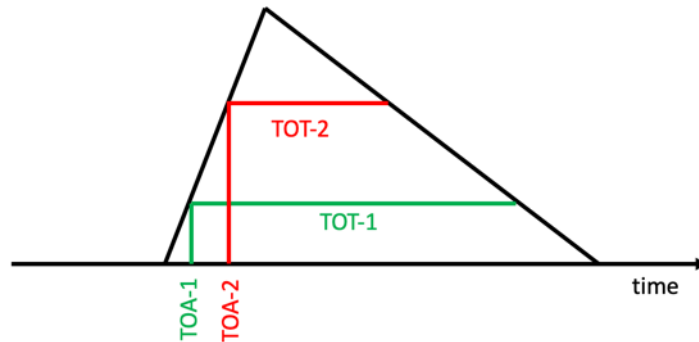

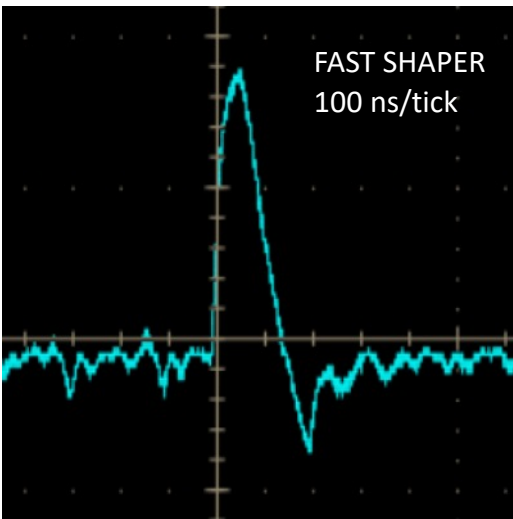

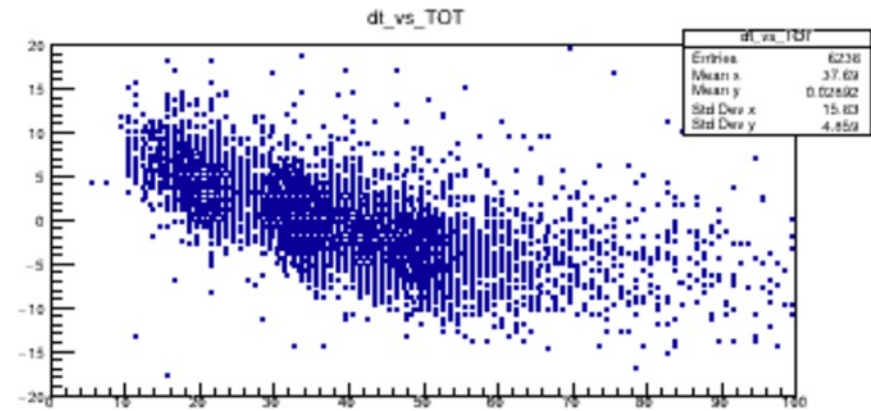

Fig. 8.1: Simplified block diagram of the A5202/DT5202 FERS-5200 unit.

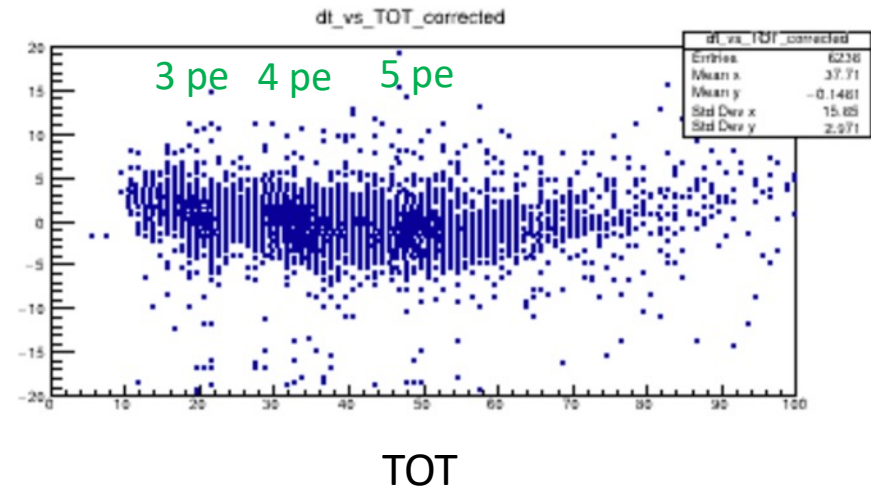

$$\text{TOA}(\text{corr}) = \text{TOA}(\text{raw}) - 0.30 \text{ TOT} - 10.0$$

$$\delta T = T(i) - T(\text{mean})$$

$$\delta T = T(i) - T(\text{mean})$$

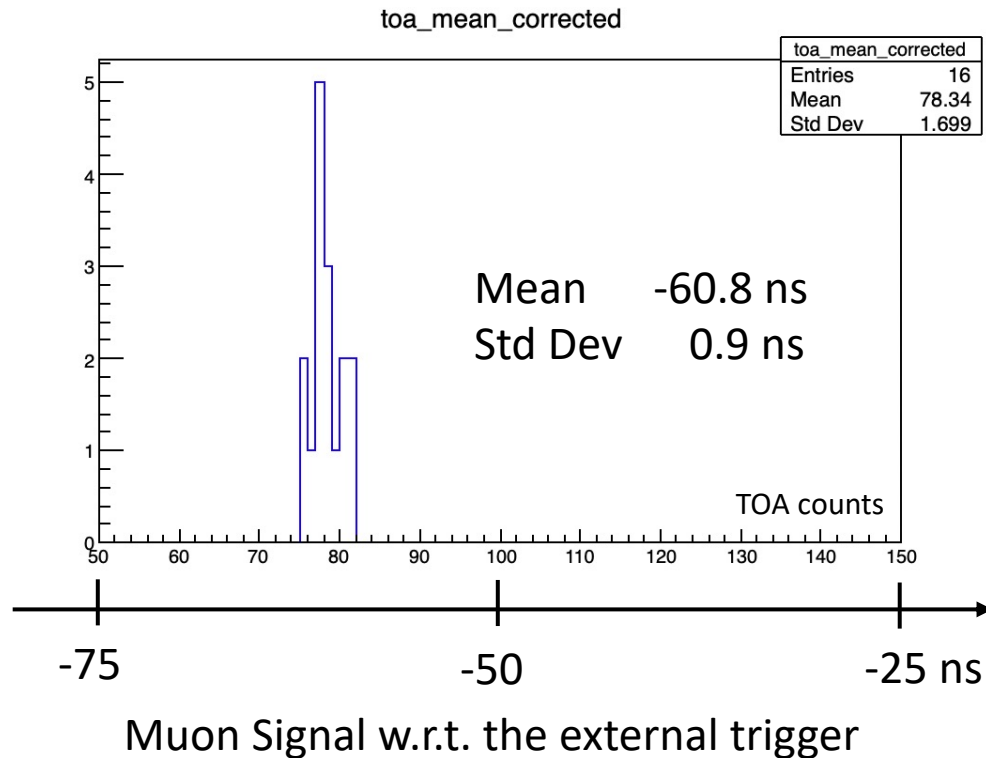

Trigger Timing

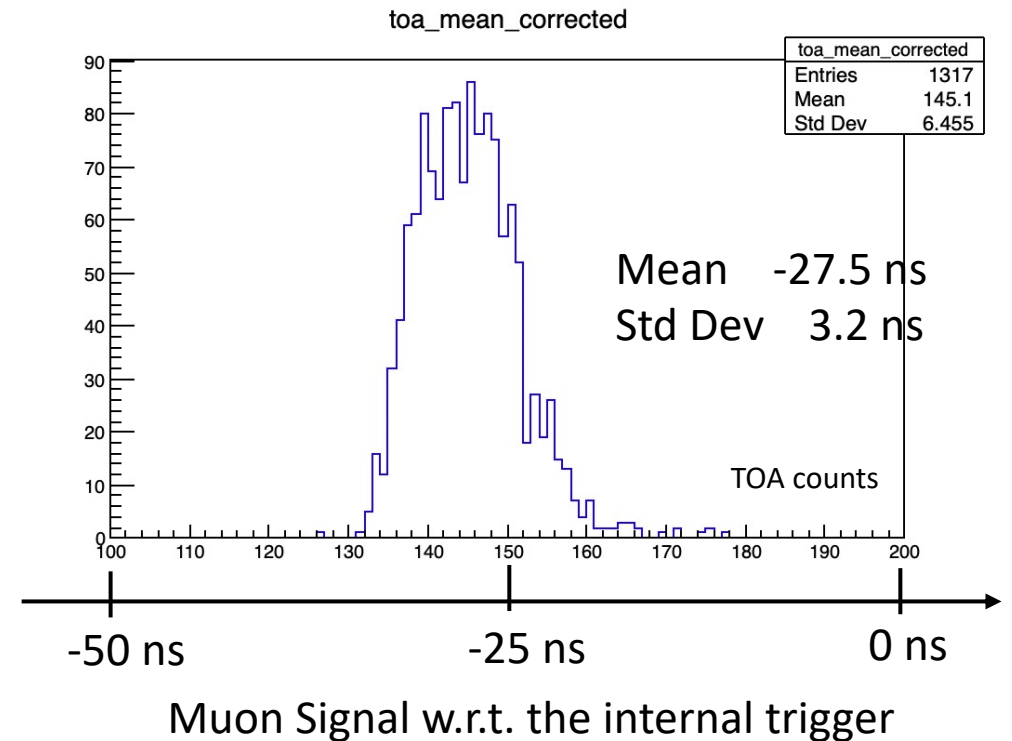

The timing of external trigger is fixed.

The timing of internal trigger varies event by event.

External Trigger

Internal Trigger

Longitudinal Segmentation with Timing

Average hadron shower longitudinal profile

4 example events

signal in
1.2 x 1.2 cm tower

R&D of fast multi-hits SiPM and readout

SiPMs in hands:

64ch array: Hamamatsu S13361-30350AE-08

64ch array: Onsemi ArrayJ-60035-64p-PCN

16ch array: SensL ArrayC-30035-16P-PCB

Single ch: SensL MicroFC-SMA-30020-GEVB (*a)

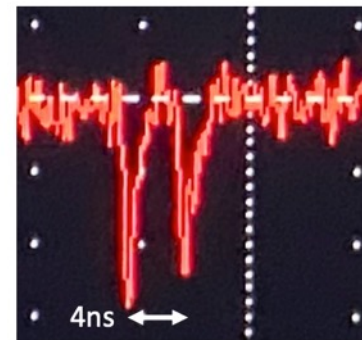

Single ch: SensL MicroFC-SMA-10010-GEVB (*b)

Fast output:

(*a) Rise time 0.6 ns, Pulse width (FWHM) 1.5 ns

(*b) Rise time 0.3 ns, Pulse width (FWHM) 0.6 ns

2 photons signal (4 ns apart)

(2.5 Gs/s on scope)
