THE FULL DARK PHOTON MAP

WHERE WE ARE

- Currently, we intersect the lowest bound of the Xenon1T experiment.
- The top line in blue describes the current setup with a one square meter dish, .05 detection efficiency, and a DCR $\sim 10^{-3}$ Hz.
- The other three lines are at different times for the optimal setup, ie. Dish area is 10 square meters, .5 detection efficiency, and 10^{-4} Hz DCR.
