

SNOWMASS YOUNG

Marcelle Soares-Santos

PURPOSE & GOALS

SY is a channel for **students, postdocs and other untenured young scientists** to help shape the future of our field.

Young scientists **contribute their expertise** to the discussion about future opportunities in our field **from a unique point of view** — that of an individual who will build a career while realizing such opportunities.

Our main goal is to motivate and facilitate such contributions, by

- Identifying meaningful ways for young **people** to get involved going beyond the scope of their own experiment or institution;
- Connecting conveners who have **tasks or studies** where a greater participation is desired with young scientists with the energy to help;
- Conducting a **survey** to provide a snapshot of the views and concerns of early career scientists of our generation.

ORGANIZATION & ACTIVITIES

200+ young scientists are currently involved.

CF SY conveners: Hugh Lippincott, Marcelle Soares-Santos

We have a **lunch time gathering** on **Thursday at 12:30**

- If you want to engage more young people in your group, and/or
- If you are a junior scientist involved in this process
- Please **join us** at **12:30–13:30** tomorrow.

The **survey** has been prepared and it is nearly ready to go live:

- We plan to **launch in April** (at the APS meeting)
- We will compare results with the 2001 SY survey
- If you are interested, **join our discussion** at **13:30-14:30** tomorrow.
