

CSAID Operations Report

Nick Peregonow for
Compute Services Infrastructure (CSI) group

February 27th, 2024

Public Compute

- GPGGrid: Alma 9 transition for worker nodes is still a WIP.
- GPCollector03 encountered a hardware failure during it's re-install to Alma9
 - As a result, only running 1 collector in GPGGrid. Impact was very small, mostly jobsub lite, and some issues with our internal monitoring.
 - Service call out to KOI.
- Hepcloud/Wilson Clusters: Internal work continues

CMS

- Cmslpc-ce encountered some issues after rolling out kernel updates. As a result, this change was reverted. We're currently in the process of evaluating if the machine needs to move to new hardware. (Note this machine is already on Alma 9)
- ITB test continues for running condor 23.3.1 tarballs for CMS Glideins.
