

Tales from the LPC

1

- Dave: Automate nobackup quotas ticket is quiet: [RITM2018905](#)
- Dave: send me draft of words to announce new nodes and reduction schedule on our lists: https://uscms.org/uscms_at_work/physics/computing/getstarted/uaf.shtml#nodes
 - Also need `/etc/motd` change once we have text for plan
- [INC000001168294](#) (missed that ticket last week), user had ROOT RDataFrame failures at a higher frequency with T1_US_FNAL_Disk files: correlated with data challenge - still failing after data challenge - no updates to the ticket in a week, any ideas Yujun?
- Three EOS tickets (mostly coffea analysis): [INC000001169111](#) (from FNAL), [INC000001169110](#) (outside FNAL), [INC000001169208](#) (no idea where they're running but coffea), maybe fixed by: "There have been a number of files with no location data (EOS knows about the file, but doesn't know where it is) confined to one particular filesystem so we're syncing the metadata on that filesystem which takes a few hours."
