

4/19/24

## BOTTOM CRP COST SUMMARY

---

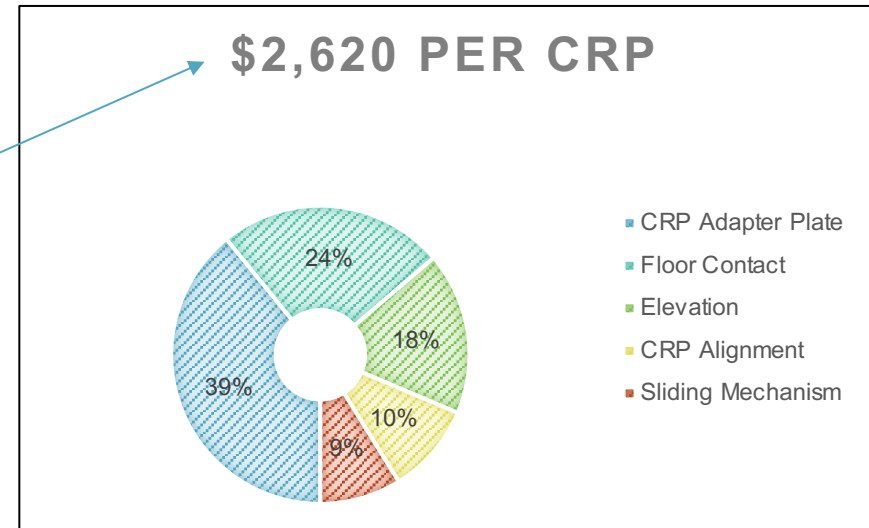

Matthew Worcester (BNL)

Bottom CRP Value Engineering Workshop

April 19, 2024

# Support Cost Estimates

- Current funds estimated in project schedule: ~\$180k
- Updated FD2 cost (today)
  - 82 bottom CRP for full fabrication order: \$215k
  - Would need around \$35k M&S added to the planned project cost
  - More labor needed to finalize and validate new design
- Previous estimated cost of ~\$4.9k per CRP required \$221k added to the CRP budget
  - Requires little added labor

Adapter plates and floor contacts are still the largest costs per foot

# Installation Tooling Updates

- Updates to installation tooling designs based on module0 need to be added to CRP budget
- Additional scope of work needed for a mockup at CERN planned in the last year
  - Also needs increase in CRP budget
- Documentation prepared in March
  - Includes a Statement of Work and Cost Estimate for U. Wisconsin to complete the tooling design and mock CRP installation at CERN

[https://docs.google.com/document/d/1KwL9lszOas46XKRNqh7vKw6H\\_goJqGYyUygbDh\\_82HY/edit#heading=h.ucyj5zf6kqa](https://docs.google.com/document/d/1KwL9lszOas46XKRNqh7vKw6H_goJqGYyUygbDh_82HY/edit#heading=h.ucyj5zf6kqa)

- Does not include the bottom CRP flipping fixture
  - Design from Nicolas (LAPP) can be updated by a US group (TBD)
  - To be added via a separate change to CRP budget
  - Add flipping fixture test to CERN mockup scope?

# Proposed New CRP Scope

The scope for the latest SOW includes:

- Upgrade the prototype tine lifting system
- Produce tine straps for the CRP lifting system
- Produce a support console for operation of the tine lifting system
- Design and produce hardware for integration of the tine lifting system with boom and jig cranes
- Design and produce a CRU installation support truss
- Produce necessary tooling to retrieve the CRP and CRU installation support trusses
- Participate in safety reviews of the installation support truss and other equipment
- Produce 12 bottom CRP support feet
- Produce 4 single support adapter plates
- Produce 4 double support adapter plates
- Design and produce surveying columns for CRP and CRU installation
- Procure necessary tools for CRP and CRU installation
- Produce documentation as required by the project
- Participate in installation activities at CERN
- Participate in design reviews as necessary

# Tooling Cost Estimates

| Materials or Services                                   | Number       | Total Cost      |
|---|--------------|-----------------|
| Tine Lifting Straps                                     | NA           | \$3,000         |
| CRP 77 and 78 installation hardware                     | NA           | \$8,000         |
| Bottom CRP supports                                     | 12           | \$18,000        |
| Single single support and double support adapter plates | 4 each       | \$10,000        |
| Tine lifting system                                     | 1            | \$15,000        |
| Lifting system control console                          | 1            | \$15,000        |
| Crane integration hardware (boom and jig cranes)        | 1 each       | \$8,000         |
| Short tine prototype                                    | 1            | \$3,000         |
| CRU installation truss                                  | 1            | \$8,000         |
| Surveying columns for bottom support installation       | 4            | \$5,000         |
| Height adjustment tools                                 | NA           | \$2,000         |
|   | <b>Total</b> | <b>\$95,000</b> |

M&amp;S

Of this material, ~\$75k worth will be used at SURF for installation

| Role                                 | FTE (year) | Salary           |
|--------------------------------------|------------|------------------|
| Graduate student research assistants | 1.92       | \$69,000         |
| Professor Franklin Miller            | 0.083      | \$13,283         |
| Professor Greg Nellis                | 0.02       | \$5,347          |
| Research Scientist                   | 0.58       | \$47,338         |
| <b>Total</b>                         |            | <b>\$134,968</b> |

Labor

# Tooling Cost Estimates

- Total additional cost of \$425k to CRP budget
  - Including university IDC and fringe (not including escalation & FNAL overhead)
- Can we reduce costs?
  - 80% of M&S spent for tooling needed at FD2
  - Possible suggestion: do the bottom CRP installation mock-up in the US
  - Saves on shipping and travel costs: possibly up to ~\$50k

|  |                  |
|--|------------------|
| University of Wisconsin Labor  |                  |
| Graduate Student   | \$69,000         |
| Faculty  | \$18,630         |
| Research Scientist   | \$47,338         |
| Labor indirect (55.5%) and fringe (36.5% Faculty and Research Scientist, 22.5% Graduate Student) | \$114,510        |
| <b>Total salary &amp; indirects</b>  | <b>\$249,478</b> |
| Graduate Student tuition   | \$23,000         |
| M&S  | \$95,000         |
| Shipping   | \$15,000         |
| Travel   | \$22,220         |
| Shipping & Travel Indirect (55.5%)   | \$20,657         |
| <b>Total M&amp;S &amp; Travel</b>  | <b>\$175,877</b> |
| <b>Total</b>   | <b>\$425,355</b> |
